**STARRING:
BRIAN PROVINCIANO**

Five finger discounts
on over 30 vehicles!

A non-stop
action explosion!

Collect loose change
from jaywalkers!

Jack all the contraband gear
from the commando base!

HELLO

my name is

Brian

For One Player

Retro City Rampage™

WITH BLURST PROCESSING!

The entire open-world is in danger.
THE PLAYER is out for a friendly frolic of CRIME CAPERS when suddenly ambushed by EVIL GOOD GUYS.
They will stop at nothing to end his RAMPAGE OF DOOM threatening the citizens of Theftropolis City.
Are YOU bad enough to defeat the EVIL GOOD GUYS?

RETRO CITY RAMPAGE lets you play as THE PLAYER. Take the wheel with five finger discounts on over 30 vehicles and wield over 20 weapons that will make you say "WHOA"! Run down innocent pedestrians to hear the magnificent monophonic modulated sounds. Order a pint of "SOUR MILK" from the barkeep to make yourself sick and avoid taking responsibility for your actions. At some point, defeat the EVIL GOOD GUYS then relax and go do it, when you want an ICED TEA.

► Press START button on LEFT controller to begin playing.

► Use both controllers for two players.

***But wait,
how long have you been working on this?***

It's been 7+ years...

- **Over 7 years!? What took you so long?**
 - An overly ambitious project!
 - Much of the development was part time
(although at many times, I worked as much as a full time job!)
 - I did everything myself (engine, tools, hardware, art)
 - I had to redo things
(rewrite code from NES to C++, draw a new city, etc.)
 - ...but the main factors:
 - Spent too long on the tech
 - Make your game already!
 - Too much time polishing minor details
 - BUSINESS. CONTRACTS. PR. PITCHES --> **MONTHS!**

Have it, Do it, Keep it in mind

- ***Passion***

- It's all you need
- Passion gives you the motivation, drives you to do your best and learn

- ***Automation***

- Do **MORE** with **LESS**, automate everything you can

- ***Design***

- It's not an afterthought
- “Gosh! There's more to design than I gave designers credit for!”

The Evolution

2004

2006

THE EVOLUTION – From NES to PC to Retro City Rampage

2010

**WATCH IN AMAZING ASTONISHMENT
IN REAL MOVING PICTURES!**

**NEW FOR
20XX!**

Defining Moment #1

Shifting from NES to PC

- NES development has many downsides
 - Debugging is limited
 - Assembly codebase getting large
 - Constantly battling with memory limitations
- Idea! I'll rewrite it easily in C on the PC, finish it, then port it back!

<undefined district>

Bike

Drop Vending Machine
Press (A) to buy (\$1)

Harbour

PC Version in 2006

Defining Moment #2

GTA, share the spotlight!

- “Haha! why don't I sneak in a Leisure Suit Larry or Monkey Island bar into the city?”
 - Wait a second!
 - “GTA: Monkey Island!”?
 - “GTA: Leisure Suit Larry”?
 - “GTA: Trailer Park Boys”? (Go CANADA!)
 - ... I like this idea!
- Started adding missions in as homage to other characters.

Defining Moment #3

The Break-Up

- “I sure would like to make this a full time job”
- “This is way too ambitious to finish part time”
- “...but, I can't make a job out of this if it uses the GTA IP”
- “Well, it would be fun to make an original game”
- The Grand Theft Auto 3 content is scrapped.

Defining Moment #4

ZOMGBBQ! This is GENIUS!

- Writing jumping code...
 - “I need to write code to handle when one character is on top of another.”
 - “What should they do?”
 - “Land on top?”
 - “Slide off?”
 - “Bounce off... and stomp the other one like Super Mario stomps goombas? HELL YES!”
- The direction shifts from gritty to **comedy!**

Defining Moment #5

Functional vs. Fun: A Programmer Learns Design

- After years, everything is **FUNCTIONAL**.
 - “Yay! An 8-bit game with everything GTA has!”
- Wait a second... “**GTA with 8-bit graphics**” doesn't mean “**FUN**”.
- It needs to be **fun at its core**.
 - Time to learn that there's more to this “design” thing...

Playtesting is Key

- Stuck in a programmer's mindset?
- Want to design a good game?
- Start with playtesting –it almost does the work for you (at first)!
- Examples...

More Automation!

- Automate EVERYTHING!
- Do MORE with LESS!

More Automation!

- I'm not doing that again!

Layouts

Shadows

Building shadows are automatic based on its height.

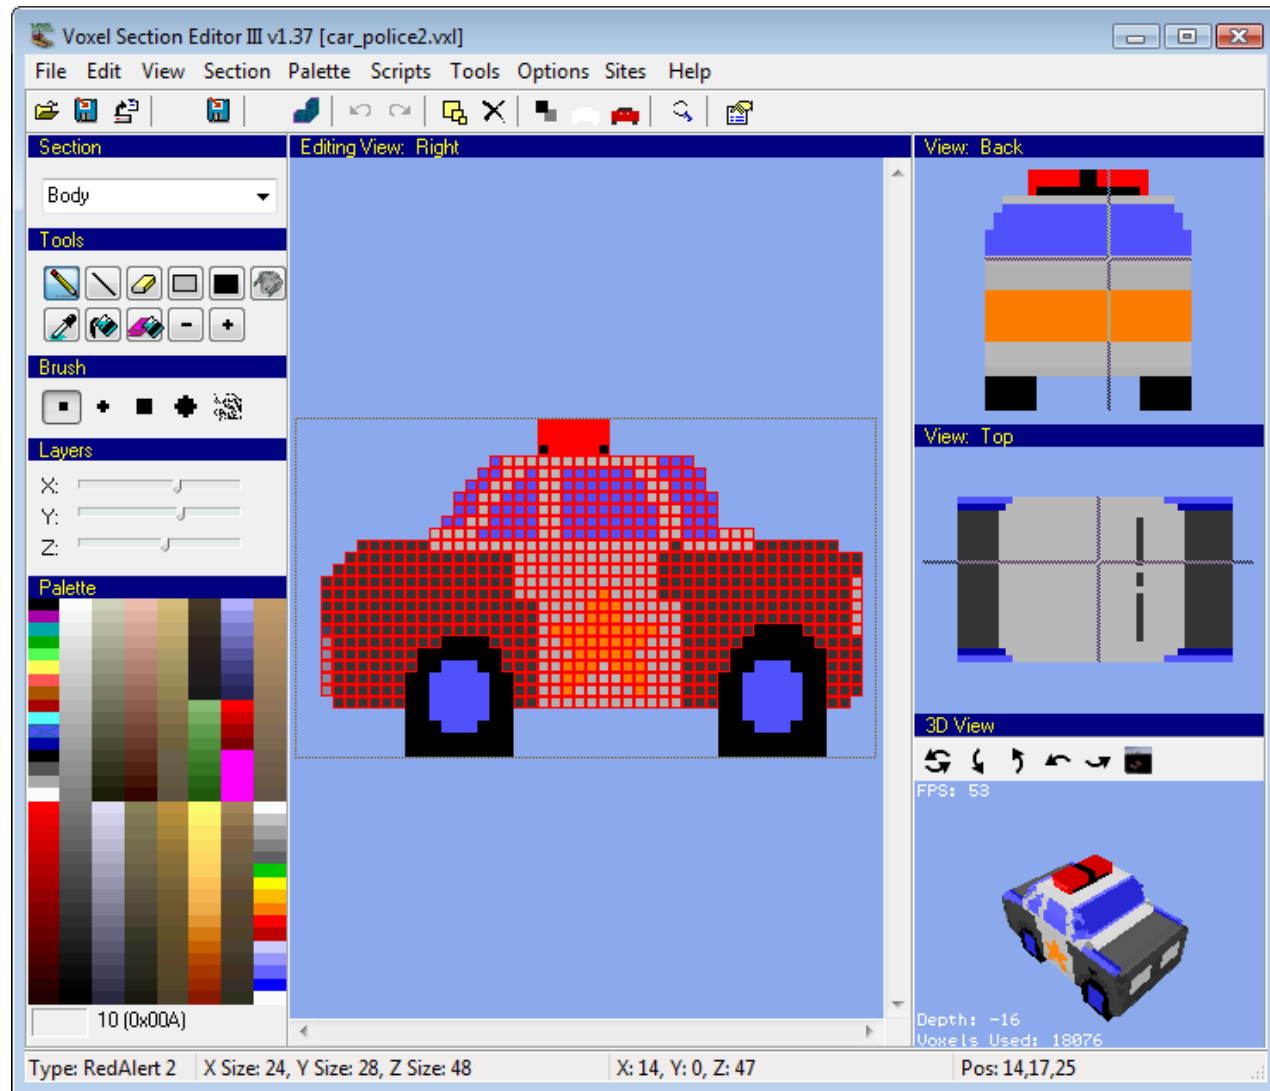

Shadows for stamps (fences, objects) can be automatic or custom. If bmp palette[253] (purple) is used in the stamp's texture, an automatic shadow will not be generated. Instead, anywhere this colour is used will become the shadow.

Ground Textures
