more words to record in
just 7 years!

Impact on job specializations

Scriptwriter

AI / Audio
Programmer

Audio
Designer

Animator

Localization
Expert

Audio
Technician

Challenges

Quality

- Localization
 - Performance of actors
 - “Culturalization”
- Uniformity
 - Studio / equipment
 - Recording session tracking
 - Post-production standards

Challenges

Complexity

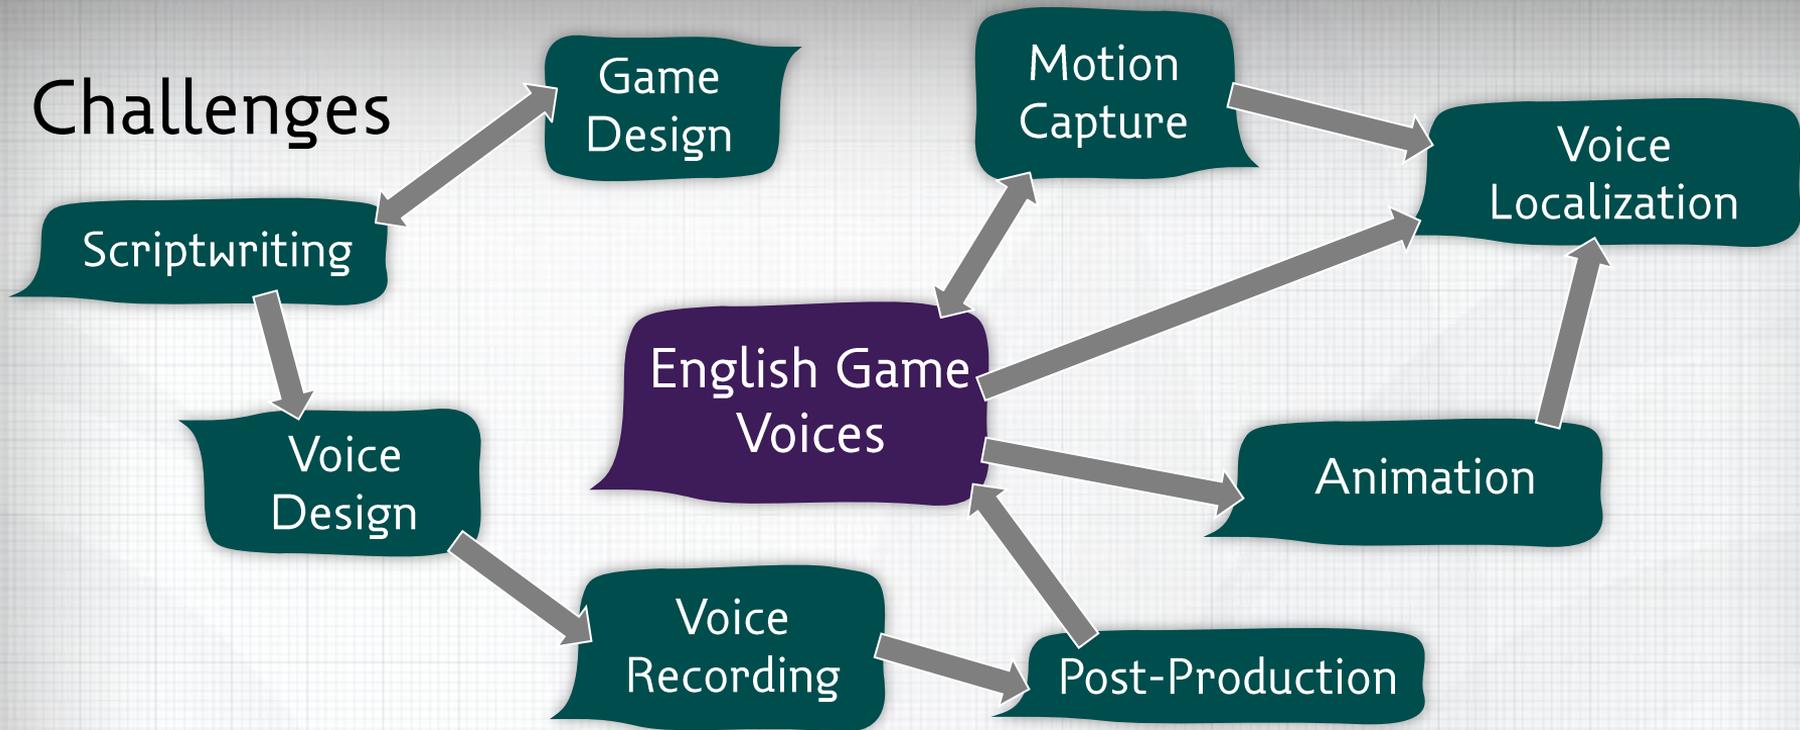

- Gameplay events are not equally important
- Strict AI structure not really inclined to changes
- Impact on voices (diversity, management)

Challenges

Quantity

- In 7 years:
 - From 2000 spoken lines to 30 000
- In less than 15 years:
 - Up to 10 voice languages
 - Up to 18 subtitle languages
- A lot more voices to record
 - More and longer recording sessions
 - Need to optimize planning

Challenges

Agility

- Strong dependency on other assets
- More content ≠ More production time

Facing these voice challenges...

Quality

Complexity

Quantity

Agility

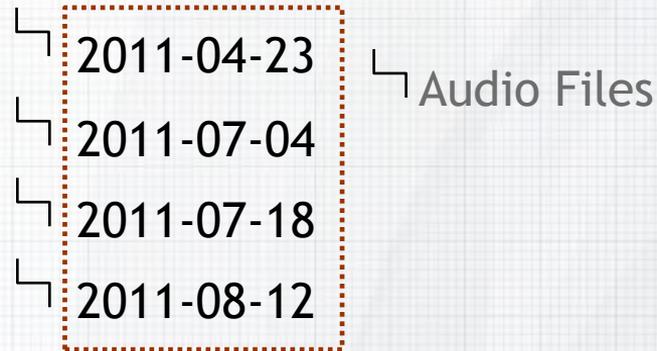

- Organizational changes
- Best practices
- Tool dedicated to voice management

Some simple and
concrete solutions...

Organize data in a logical hierarchy

Game structure

Recording session dates

Have a bulletproof audio file naming convention

- A descriptive identifier

AI_SCR_BARTO_ENT_FGT_BARTO_001
AI_SCR_BARTO_ENT_FGT_BARTO_002
AI_SCR_BARTO_ENT_FGT_BARTO_003

“ Finally things get interesting! ”
“ Come! Let's see what you can do! ”
“ [Laugh] What fun this will be! ”

- A static identifier → 482643, 482644, 482645

AI_SCR_BARTO_ENT_FGT_BARTO_001@482643.wav

AI_SCR_BARTO_ENT_FGT_BARTO_002@482644.wav

AI_SCR_BARTO_ENT_FGT_BARTO_003@482645.wav

Organize data in a logical hierarchy

Have a bulletproof audio file naming convention

Add more contextual data to spoken lines

- Voice intensity/projection
- Parenthetical
- Action description

Best Practices

Organize data in a logical hierarchy

Have a bulletproof audio file naming convention

Add more contextual data to spoken lines

Be ready for last minute changes

- Have reference & last minute recording documents
- Have a reliable change tracking system
- Have a flexible gameplay structure
- Identify and understand the potential impacts upstream

Organize data in a logical hierarchy

Have a bulletproof audio file naming convention

Add more contextual data to spoken lines

Be ready for last minute changes

Track voice usage upstream with **statistic tests**

1. Use text-to-speech voices
2. Play and record the events triggered
3. Adjust AI variations following the feeling and the statistics

Best Practices

Organize data in a logical hierarchy

Have a bulletproof audio file naming convention

Add more contextual data to spoken lines

Be ready for last minute changes

Track voice usage upstream with statistic tests

Improve communication between people

Good communication between the teams impacted by voices is imperative

- Scriptwriters
- Audio/Voice Designers
- Localization Experts
- Animators
- Programmers

Organize data in a logical hierarchy

Have a bulletproof audio file naming convention

Add more contextual data to spoken lines

Be ready for last minute changes

Track voice usage upstream with statistic tests

Improve communication between people

Have a Voice Designer position!!!

- Design and follow game play vocal feedback systems and features
- Design or adapt batch integration and synchronization pipelines
- Record and track sound studio deliverables
- Data organization and follow-through
- Test, polish, mix and close

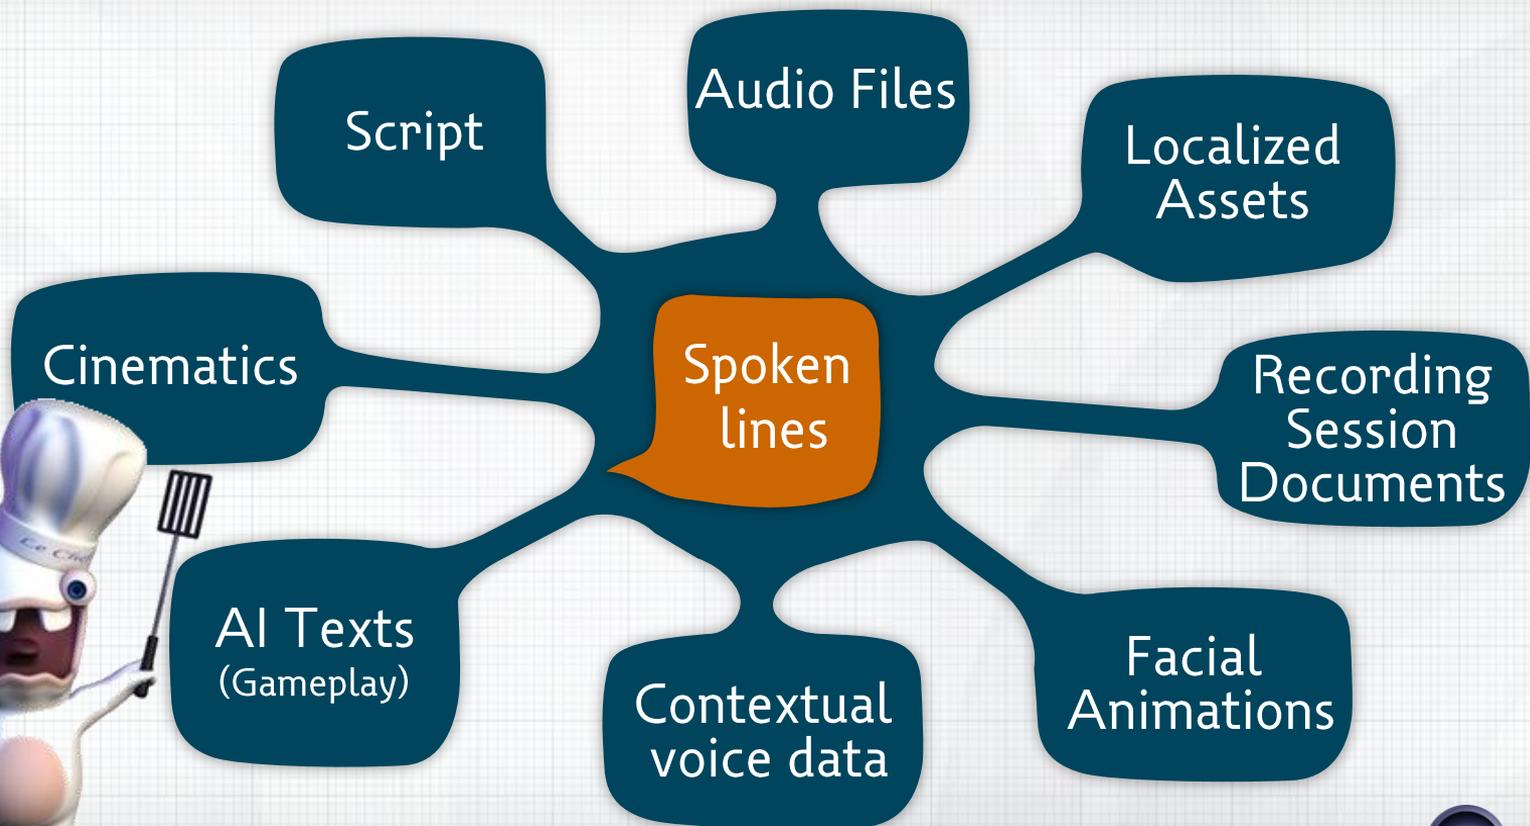

“*Voice Design* is the design and synthesis of character voices and voice systems, enhancing the gameplay experience.”

- Richard Calamatas was Ubisoft's 1st Voice Designer

Next step:
A voice management tool

The Idea of a Voice Management Tool

Ubisoft Voice Management Tool...

OASIS

Demo

http://www.youtube.com/watch?v=8vCUwGbAiYk&feature=player_embedded

The Benefits...

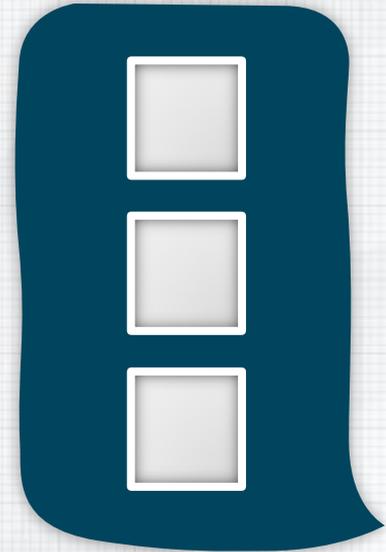

- Collaboration / Unique Access Point
- Better Data Management
- Easy Tracking / Review

Future possibilities

- Be part of other voice related tool pipelines
- Localization in-game & voice timing validation
- Improve multi-site support

Voice challenges in today's games...

Quality

Complexity

Quantity

Agility

Ideas to overcome them:

Organize data in a logical hierarchy

Adopt a clear audio file naming convention

Add more contextual data to spoken lines

Be ready for last minute changes

Improve communication between people

Track voice usage upstream with **statistic tests**

Have a **Voice Designer** position!!!

Dedicated voice management tool

A close-up photograph of a male action character with a beard and intense expression, wearing a dark, ribbed sweater and a tactical vest. He is holding a silver handgun with both hands, aiming it forward. The background is a light gray grid pattern.

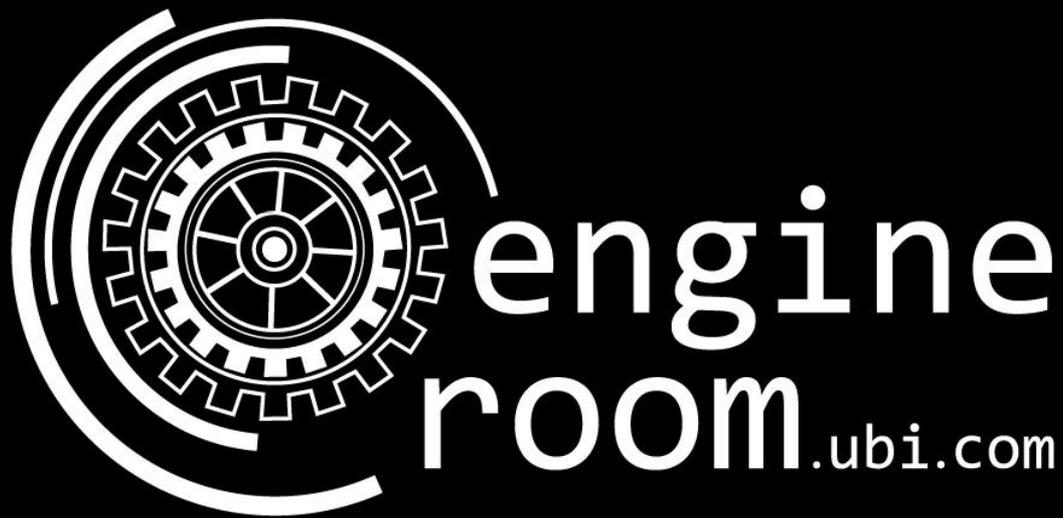

Any Questions?

Alexandre Piché, Eng.
Tools Product Manager
Technology Group, Ubisoft
