

50 Lessons from 80+ VR & AR Prototypes

Rob Jagnow, Software Engineer
Google Daydream Labs
[@robjagnow](#)

Audio

#1

Great audio is critical
to immersion

#2

Spatial audio is more
than just dynamic
volume

Process

#3

Iterate. Your first idea
probably won't be
your best

#4

Test in VR ASAP

#5

Scope

#6

Not every experience
will be better in VR

#7

Don't be constrained
by reality

#8

Design from the
ground up
specifically for VR

Motion

#9

When your eyes and
your vestibular
system disagree, you
get sick

#10

Minimize problems
with constant velocity
or “blink teleport”

position

velocity

acceleration

position

#11

Be creative with
teleportation preview
and other types of
motion

#12

Narrow the FOV
while moving

#13

Teleport to a
psychologically safe
space

Interaction

#14

Players love
experiences that
allow for creativity ►

3

6

#15

Let them throw it!

#16

Think about gestures

#17

Let sloppy actions
have structured
results ►

#18

Give your players
superpowers

Controllers

#19

Use snapping to
constrain motion ►

#20

Keep interactions in
a comfortable space

#21

Controls don't have
to be mapped 1:1

#22

Use haptics

Environments

#23

We love huge
spaces

#24

Divide your world into
smaller spaces that fit
into a typical physical
space

#25

Place objects in a
way that keeps
players in the
physical space

#26

Texture everything,
even if it's just a
subtle noise texture

#27

Show the physical
bounds in the virtual
world

#28

Everyone loves
particles!

Scale

#29

Accurate scale
matters

#30

Scale can convey
power or vulnerability

#31

Use scale as a tool ►

A large orange circle in the top-left corner of the slide.

#32

When you change
scale, don't forget to
scale physics and
audio

Copresence

#33

Players expect
something to happen
when they touch

#34

Don't reward bad
behavior ►

Server: port=7777
Client: address=localhost port=7777

#35

Do reward prosocial
interactions ►

Ser
Cli

Stop (X)

#36

Enforce social
boundaries

#37

Voice chat multiplies
immersion

#38

Put shared objects at
the center of the
space

#39

Think about
asymmetric
experiences

Avatars

#40

Avoid full-body
avatars in a first-
person view ►

#41

Eyes are the window
to the soul ▶

Server: port=7777
Client: address=localhost port=7777

Stop (X)

#42

When you pick up an
item, that item can
become your
controller

#43

Beware of the
uncanny valley▶

Server: port=7777

Client: address=localhost port=7777

Stop (X)

UI

#44

Avoid UI that
requires you to turn
your head

#45

Not too close, not too
far

#46

Keep the text big

Smartphone VR

#47

A well-designed
elbow model can
make interactions
feel natural ►

#48

Performance matters

Final takeaways

#49

Check out what
others are doing

#50

You're a pioneer.
Think big!
