

ZEN & THE ART OF #GAMEAUDIO MAINTENANCE

Introduction

- Anton Woldhek
 - Celebrating 12,5 years in #gameaudio
 - Principal Sound Designer @ Guerrilla Games since 2007
 - Horizon Zero Dawn – PS4 (2017)
 - Killzone Shadow Fall – PS4(2013)
 - Killzone 3 – PS3 (2011)
 - Killzone 2 – PS3 (2009)
 - Not a Zen Monk
- Robert M. Pirsig
 - Zen and the Art of Motorcycle Maintenance
 - Lila

Relationship with Technology

- Love
 - Enables your Creative Ambitions
 - Treat technologic objects like religious artefacts.
- Hate
 - Get angry at a machine/software
- Trust

The Game Dev Triangle

Ambition

Company Culture

States of Dev

The Wave

The Wave

- Not all colleagues in same state
- Can have multiple waves

The Wave – Before the Wave

- Chaos comes from the questions you cannot answer
- But you know that answering as many as possible is critical

The Wave – During the Wave

- Chaos comes from deadlines, scope, unexpected changes
- Certainty there isn't enough time to address
- Narrowing of focus
- Achieve the ambition.

The Wave – After the Wave

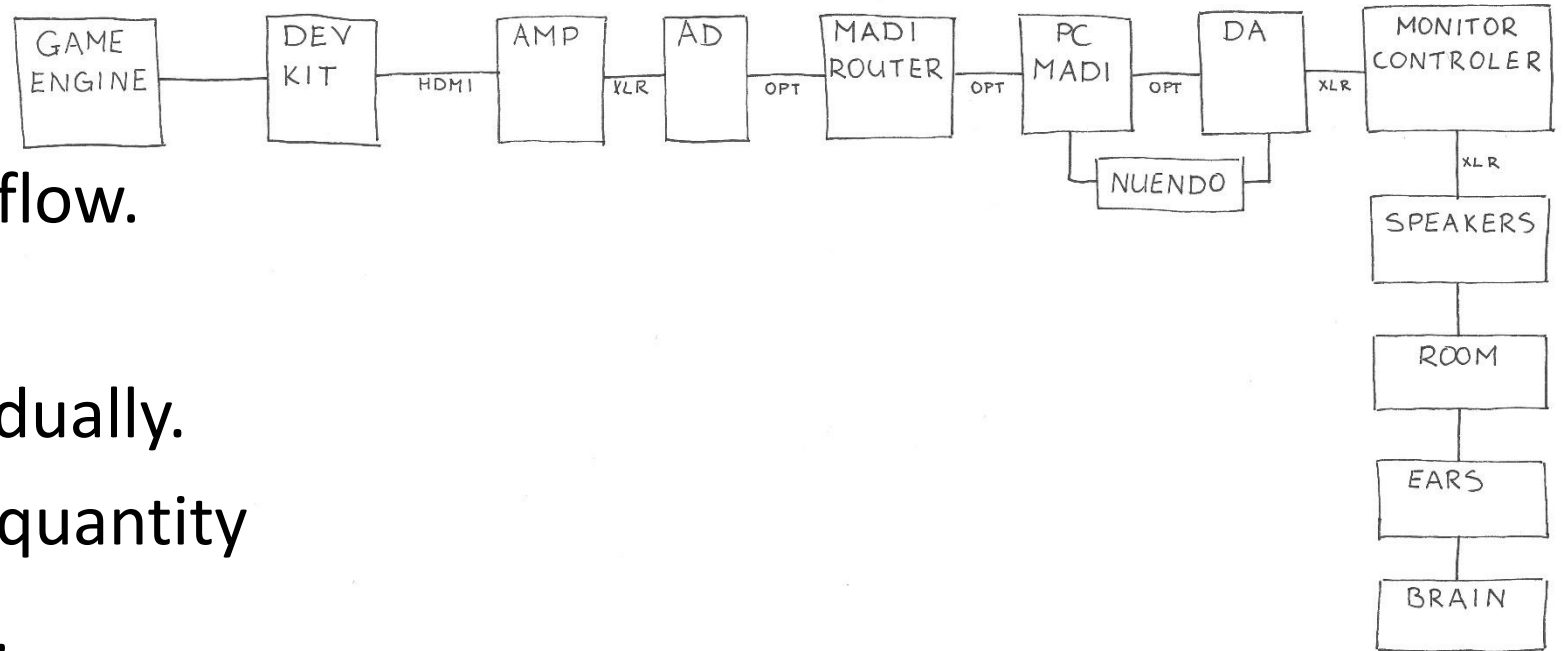

- Audience Reaction
- Lots of new information from having so many players

Pre Wave Practicalities

I – Verifying your chain.

- Draw out your signal flow.
- Test end to end
- Then each step individually.
- Calibrate to a known quantity
- RE-calibrate regularly.

II – Ingame Test Sound

- Trigger from debug menu

III – Identify & Engage Allies

- Wicked Repro Magician
- Sharp Analytical Mind
- Trusty Creative Ear

Wave Practicalities

IV – Before you run of...

- Realize you are hyper focused.
- Ask yourself some questions

IV – Before you run of...

- Is your signal chain still calibrated?
- Are you missing something obvious?
- What does my content do?
- How is my content triggered?
- What does the debug tell me?
- Is the debug lying?
- When did you hear something similar?

IV – Before you run of...

- Who are you going to talk to?
- Why?
- What would she tell you?
- How stressed am I?
- What is my weakness?
- What is my strength?

IV – Before you run off...

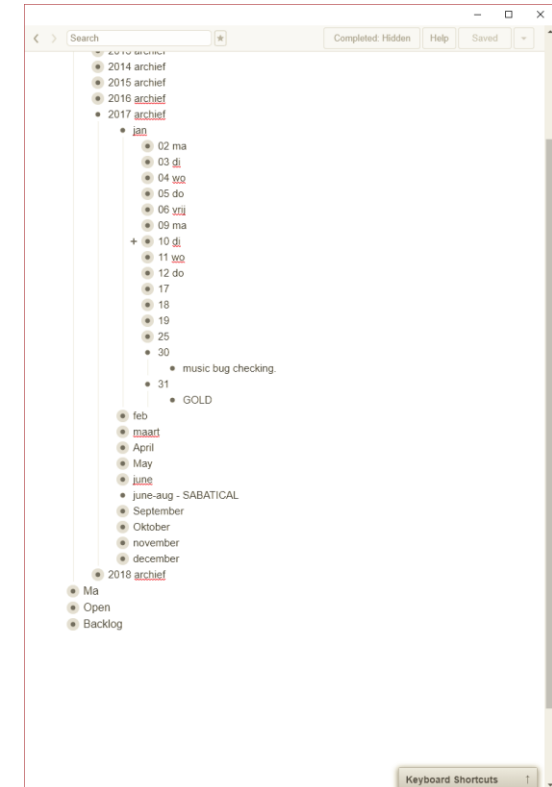

- Let some time go by
- Capture it and play it back
- Start over with a blank canvas
- Read the Revision History
- What you hear is not what you see (turn off your screen/close your eyes)
- What you see is not what you hear (turn off your speakers)
- Isolate it as much as possible.

IV – Before you run of..

- Reboot.

IV – Keep tally of the mice

- Keep a daily log of activities.
- Note perceptions gaps. Then let it go.

Post - Wave Practicalities

V - Clean up the mess

- Working on a deadline does not always create beautiful assets.
- Refactor them or throw them away.

VI – Reflect on the bug log.

- Identify how to prevent the bugs on the log.
- Design approaches to find these gaps in perception sooner.

Questions?

@woldhek , anton@guerrilla-games.com
