

# WHAT CATS CAN TEACH YOU ABOUT EMPATHIC GAME DESIGN

# CHROME CARS

# WHAT CATS TAUGHT ME

Relying on verbal communication is making  
you a worse game developer

# **ew — AND — Me**

GAMES FOR CATS • FACTS FOR PEOPLE

# THE FIRST PROTOTYPE: WILL IT WORK?

# THE VERY FIRST USER

# TRADITIONAL USER TESTING

Applied to Cats

# TESTING

- Tested **web prototype** on **9** cats
- **2** cats watched the device with no tapping
- **1** cat interacted with the device, but **immediately lost interest**

33% ENGAGEMENT

We can do better than that

## BIG DISCOVERY 1

Cats get bored without feedback

# NEW PROTOTYPES

YOU TELL ME: DID IT WORK?

# KINDA!

- Tested **touch prototype** on **29** cats
- **7** only watch
- **6** others engage
- **0** cats gave us their thoughts

45% ENGAGEMENT

That's pretty good, right?

# NOPE

To us, watching was engagement. **To our users, it didn't count** unless their cats attacked the screen: reducing our actual engagement to **20%**.

# ENTER EMPATHIC DESIGN

Experiencing what your end user experiences, with your end user

# DESIGNING A BABY BOTTLE

- Milano enters the baby bottle market
- Spend hours observing children using the product
- Notice developmental stages play a role in design
- Notice needs from the child **as well as the parent**

# EMPATHY MAPPING

- User's name and picture in center
- Individual moments per category around the outside
- Unique map per user

# THE PROBLEM WITH CATS

- Only get  $\frac{1}{4}$  with cats
- **Communication** is our key problem
- **Understanding** has to replace communication

# FILLING OUT THE MAP

## Do the Research

We read a lot of books and looked up a lot of cat facts. Turns out cats are **semi-color blind**, have **poor vision** within a foot, are primarily **motion** based, and see at up to **60 FPS**.

## Find the Experts

We found cat behaviorists and asked as much as we could. They **agreed that watching is engagement** and pointed out that **vision is only part of hunting**

## Spend Time with Them

We started regularly going to Cat Cafes and testing with the cats there. Turned out that **different cats liked different games**, and many cats seemed to **not see the mouse**.

**SAYS**

**WHERE IS  
IT?**

**THINKS**

**THERE IS  
MOVEMENT!**

**DOES**

**MISSES  
SCREEN**

**FEELS**

**MUST ATTACK!**

WHAT DO YOU THINK WAS WRONG?

## BIG DISCOVERY 2

Our art style was ruining everything

# ENGAGE THE CATS

## PEOPLE VISION

## CAT VISION

# LAUNCH READY GAMES

- Tested new prototype on **42** cats
- **11** only watch
- **18** others engage
- **0** cats told us why they liked it now

# EMPATHIC DESIGN ON CATS

	Before	After
Cats Tested	29	42
Percent Watch	24%	26%
Percent Engage	20%	43%

And we did it without a single word from our users

IF IT WORKS FOR CATS...

Does it work for peoples?

“

I don't use the data screen at all. But I like it. It's why I show people the app.

— • —

**SAYS**

**WATCHING  
DOESN'T  
COUNT**

**THINKS**

**DATA IS  
"NEAT"**

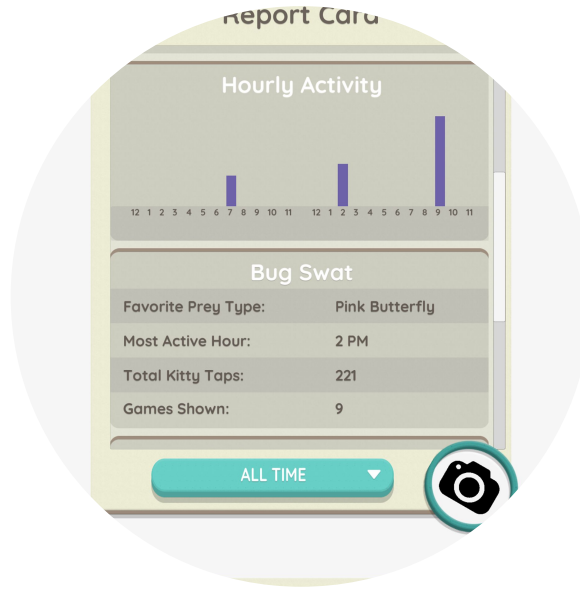

**DOES**

**PLAYS IN  
PERSON**

**FEELS**

**MISSES THEIR  
CAT**

## BIG DISCOVERY 3

We were selling an intellectual product to emotional people

# EMPOWER THE PEOPLE

## My Cat's Not Playing!

After speaking to some cat-sperts we are happy to report that even when a cat watches the device, this is giving them some form of stimulation. It's just like looking out of a window!

Prey Stalker: 10228 Responses

Bug Swat: 10388 Responses

Prey Stalker Bug Swat String Fling

62% ENGAGEMENT

And this is NOT including cats that watch

# AND NOW, YOUR REWARD

I know what you're here for

## OUR KEY TAKEAWAYS

1. Empower ***Their*** Use Cases
2. **Research** your Target Users
3. Use **Empathy Mapping**

And....

# THE TRUE MORAL OF THE STORY

**Spend the time to understand your user,  
not just talk to them**
