Early Stage Game Evaluation: Lessons Learned and Best Practices

Jiasheng Hu
Senior UX Researcher, Netease

Yongcheng Liu
Director of UX department, NetEase

#GDC22

Why are early assessments for 'Good Game' so important?

- To bring a refreshing and fun game experience to players
- To evaluate whether it is a 'good game' ASAP

Netease Games established

Early evaluation system

score

How to define 'good game' & 'early stage'

1. Concept of “early stage”

Product

(only 1 game design concept or demo)

1. Concept of “early stage”

Product

(only 1 game design concept or demo)

Team

(Small size with less than 10 core members)

1. Concept of “early stage”

Product

(only 1 game design concept or demo)

Team

(Small size with less than 10 core members)

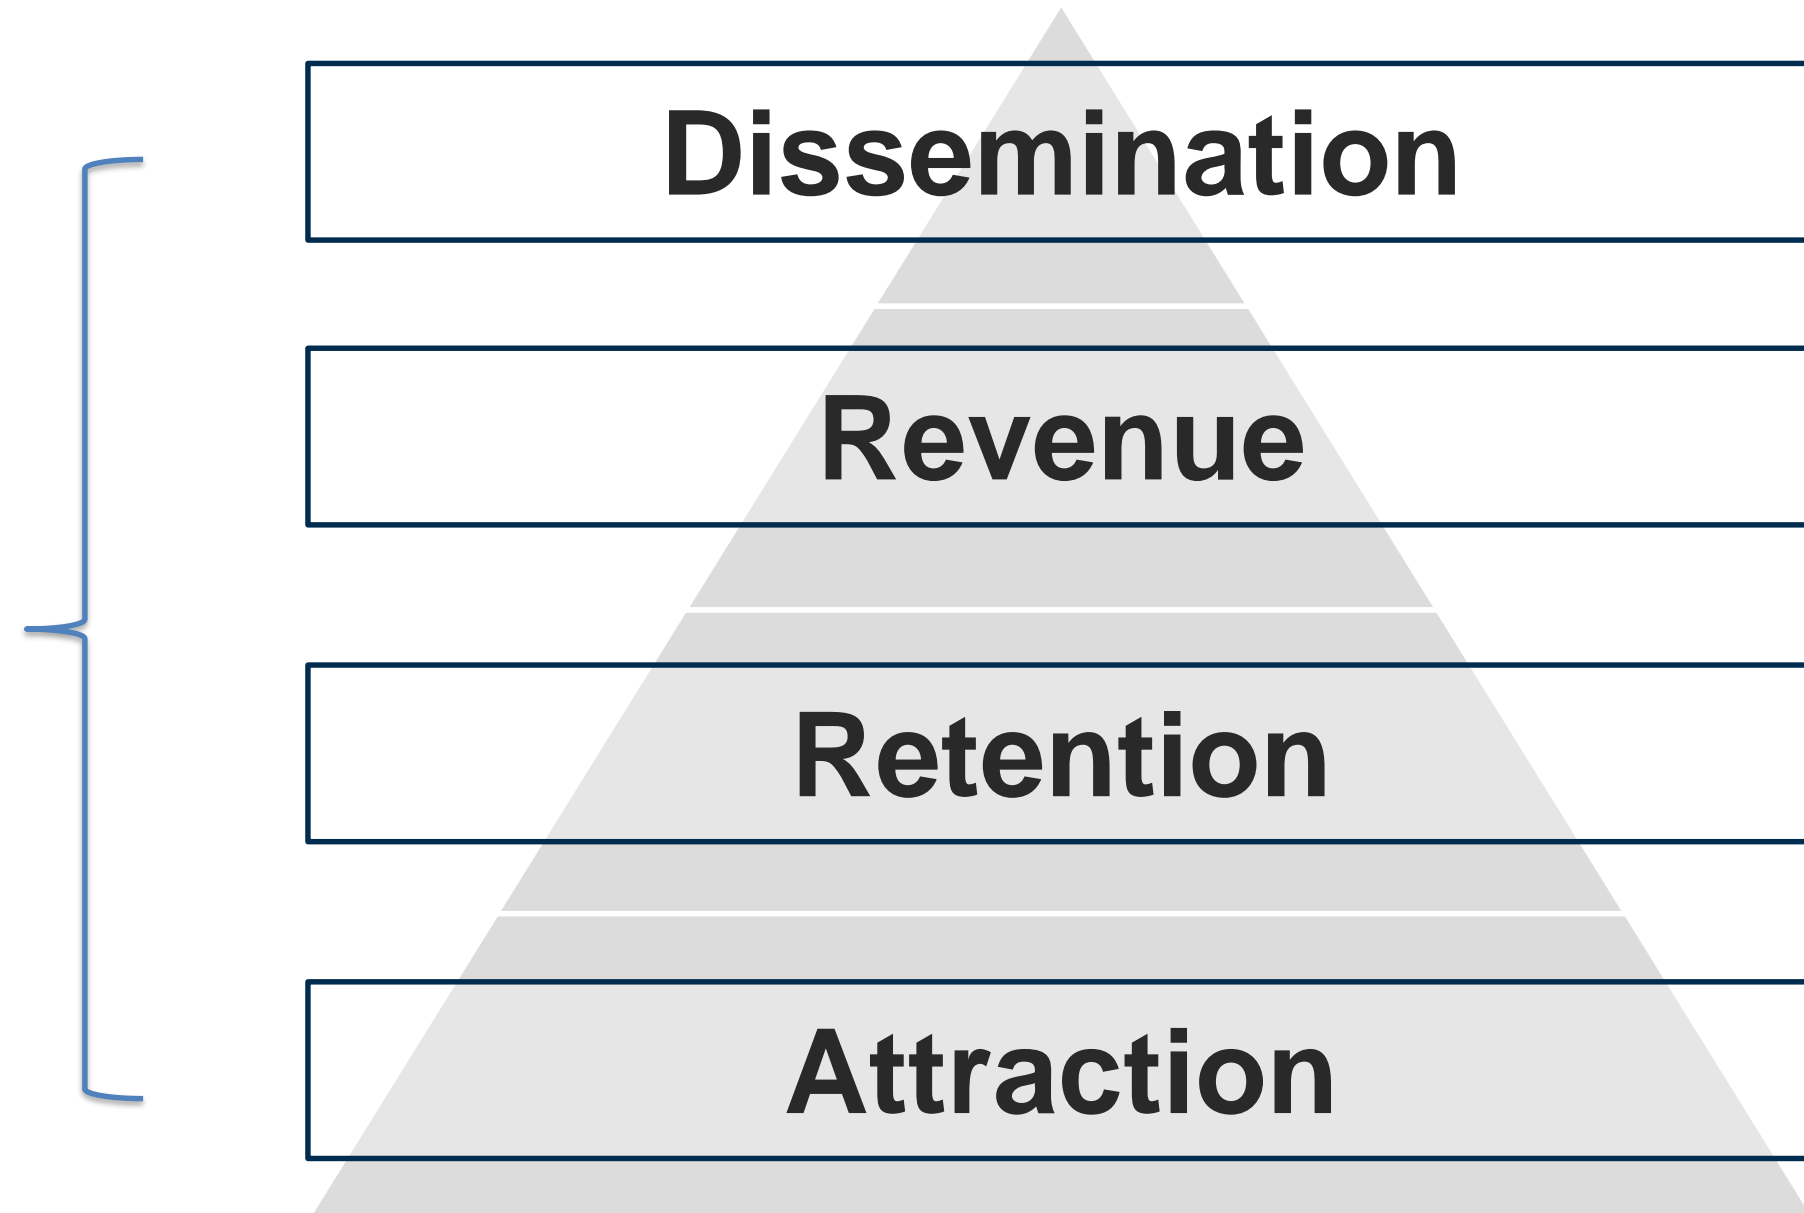

Period

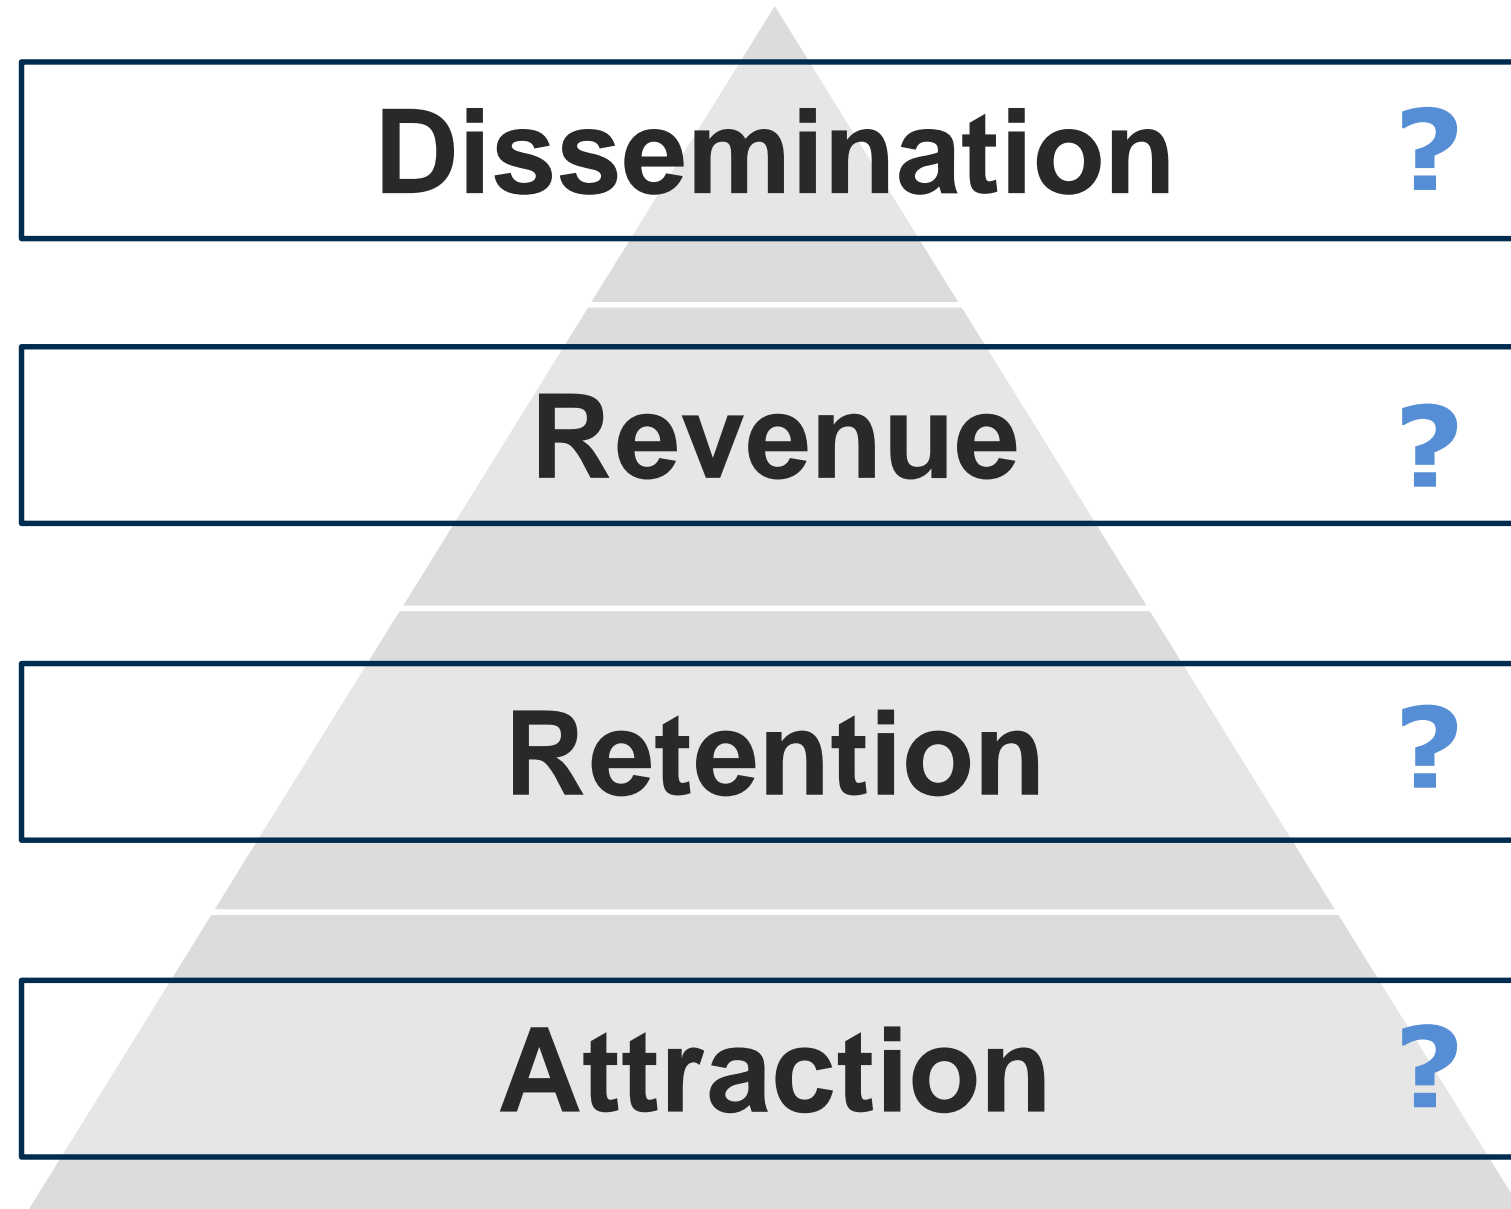

(Small investment, typically within 6 months of R&D)

2.Quantitative values defining a “good game”

**GOOD
PRODUCT**

2.Quantitative values defining a “good game”

**early stage

Experience Evaluation: 3 X 10 Assessment

Surprise

Surprise is how the game exceed our players' expectation.

Here we assess how surprise our users feel about the gameplay during the demo stage

Experience Evaluation: 3 X 10 Assessment

Player evaluator pool

For player evaluators, we need to clarify the game type and structure

Type I

Core players from target competitors

Type II

Secondary target users

Type III

Users in the broad DAU market

Experience Evaluation: 3 X 10 Assessment

Player evaluator pool

- After identifying the game types, we need to control the demographics (age, gender, occupations) of player evaluators in the pool.
- We can refer to existing personas from competitor products at this stage.

Experience Evaluation: 3 X 10 Assessment

Different Platforms & Devices

- Demo testing includes core gameplay and highlight contents.
- Wild game-play scenarios on various devices and platforms.

Mobile Phone

Random sampling

PC

PC lab test with invitations

Console

Lab test with invitations

Experience Evaluation: 3 X 10 Assessment

Mobile

Mobile game evaluation in the US

Mobile game evaluation

- A cozy environment
- Little interference
- First impression
- surprising experience

Experience Evaluation: 3 X 10 Assessment

PC & Console

- Evaluation done in the studio labs.
- The lab settings close to the gameplay in reality.
- Little interference.

Console game lab tests

Target Player Selection

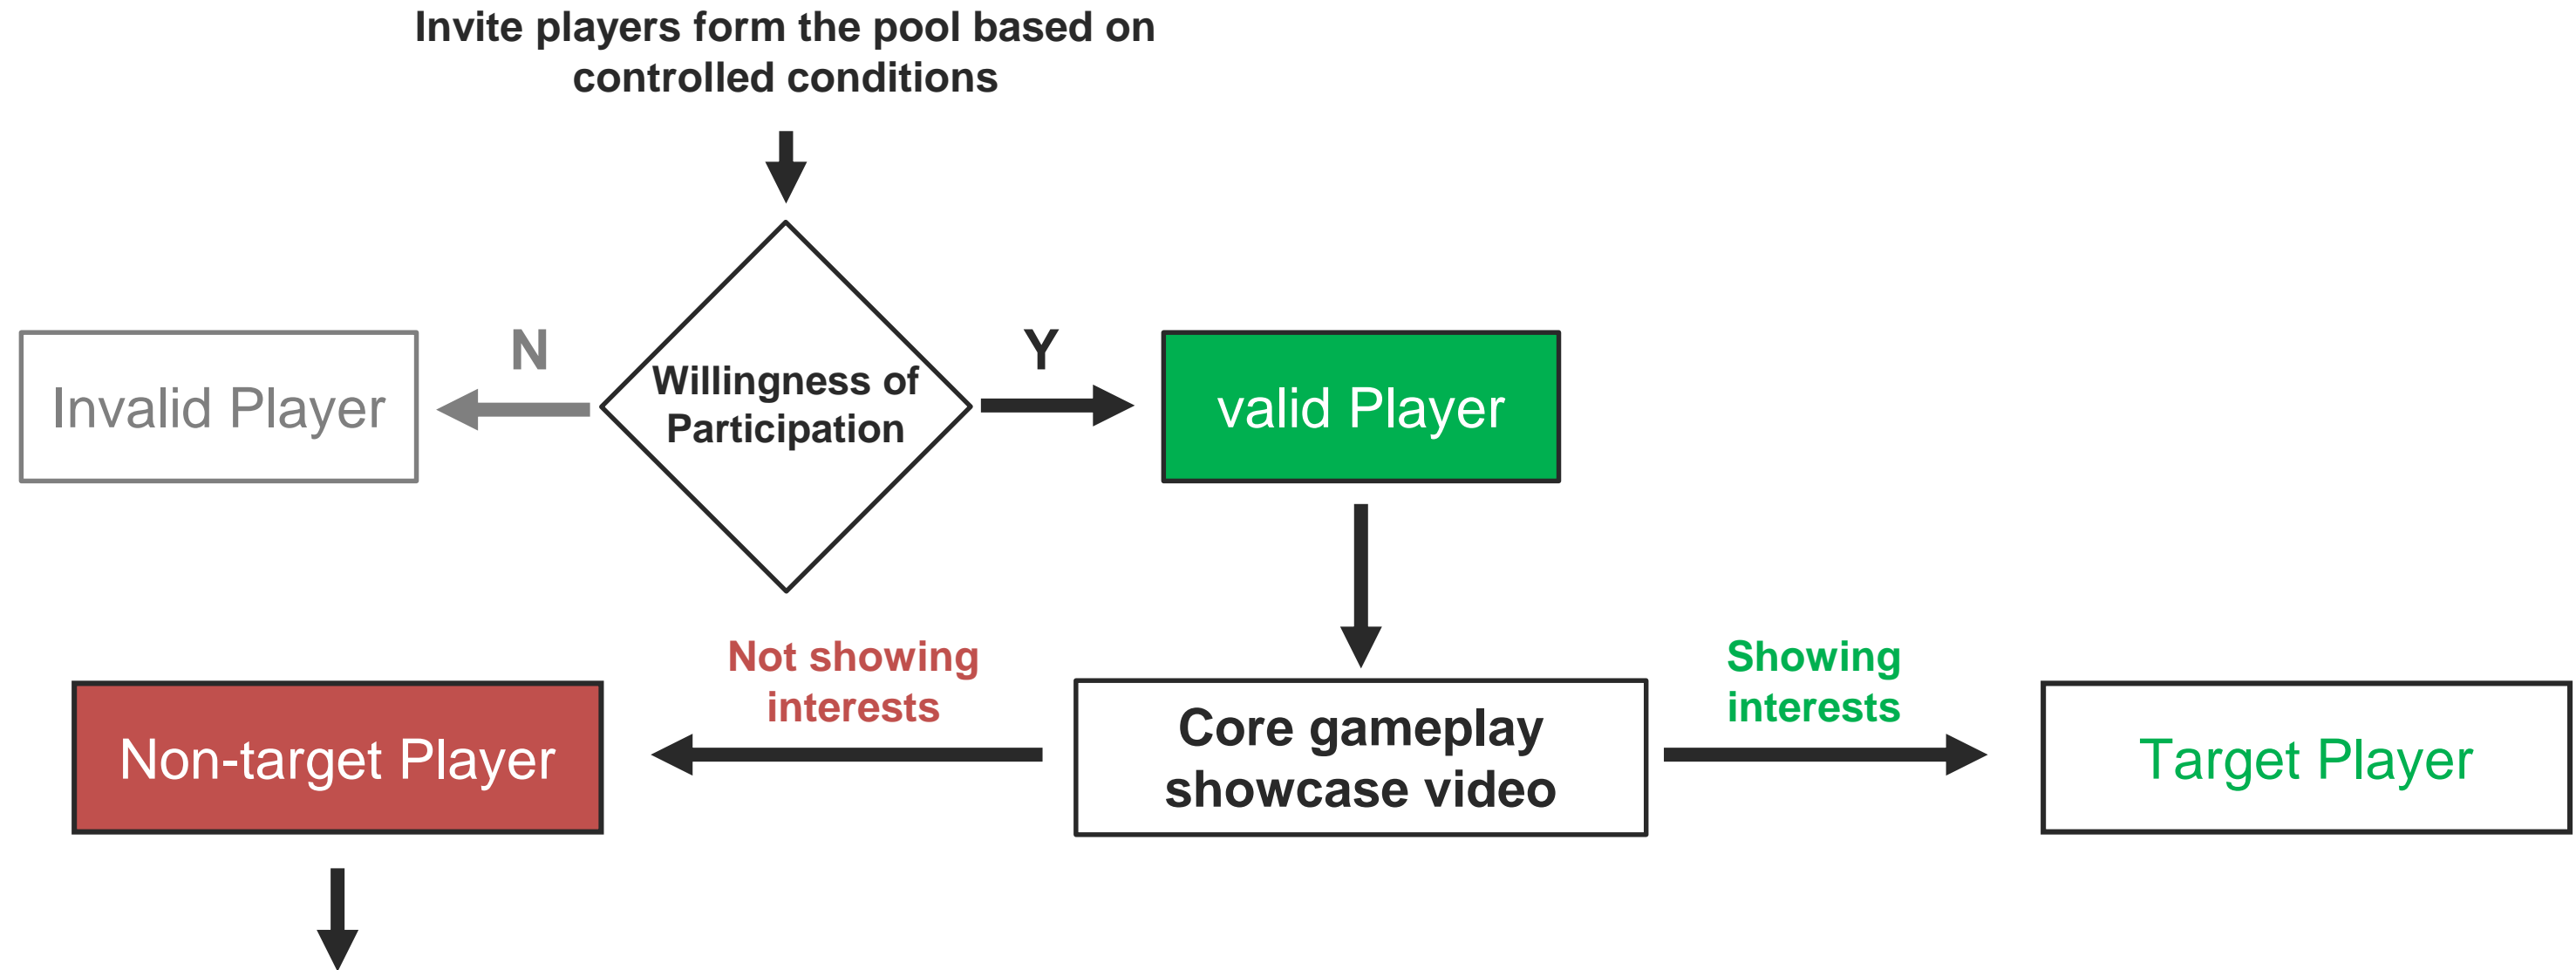

Experience Evaluation: 3 X 10 Assessment

Target Player Selection

Experience Evaluation: 3 X 10 Assessment

Target Player Selection

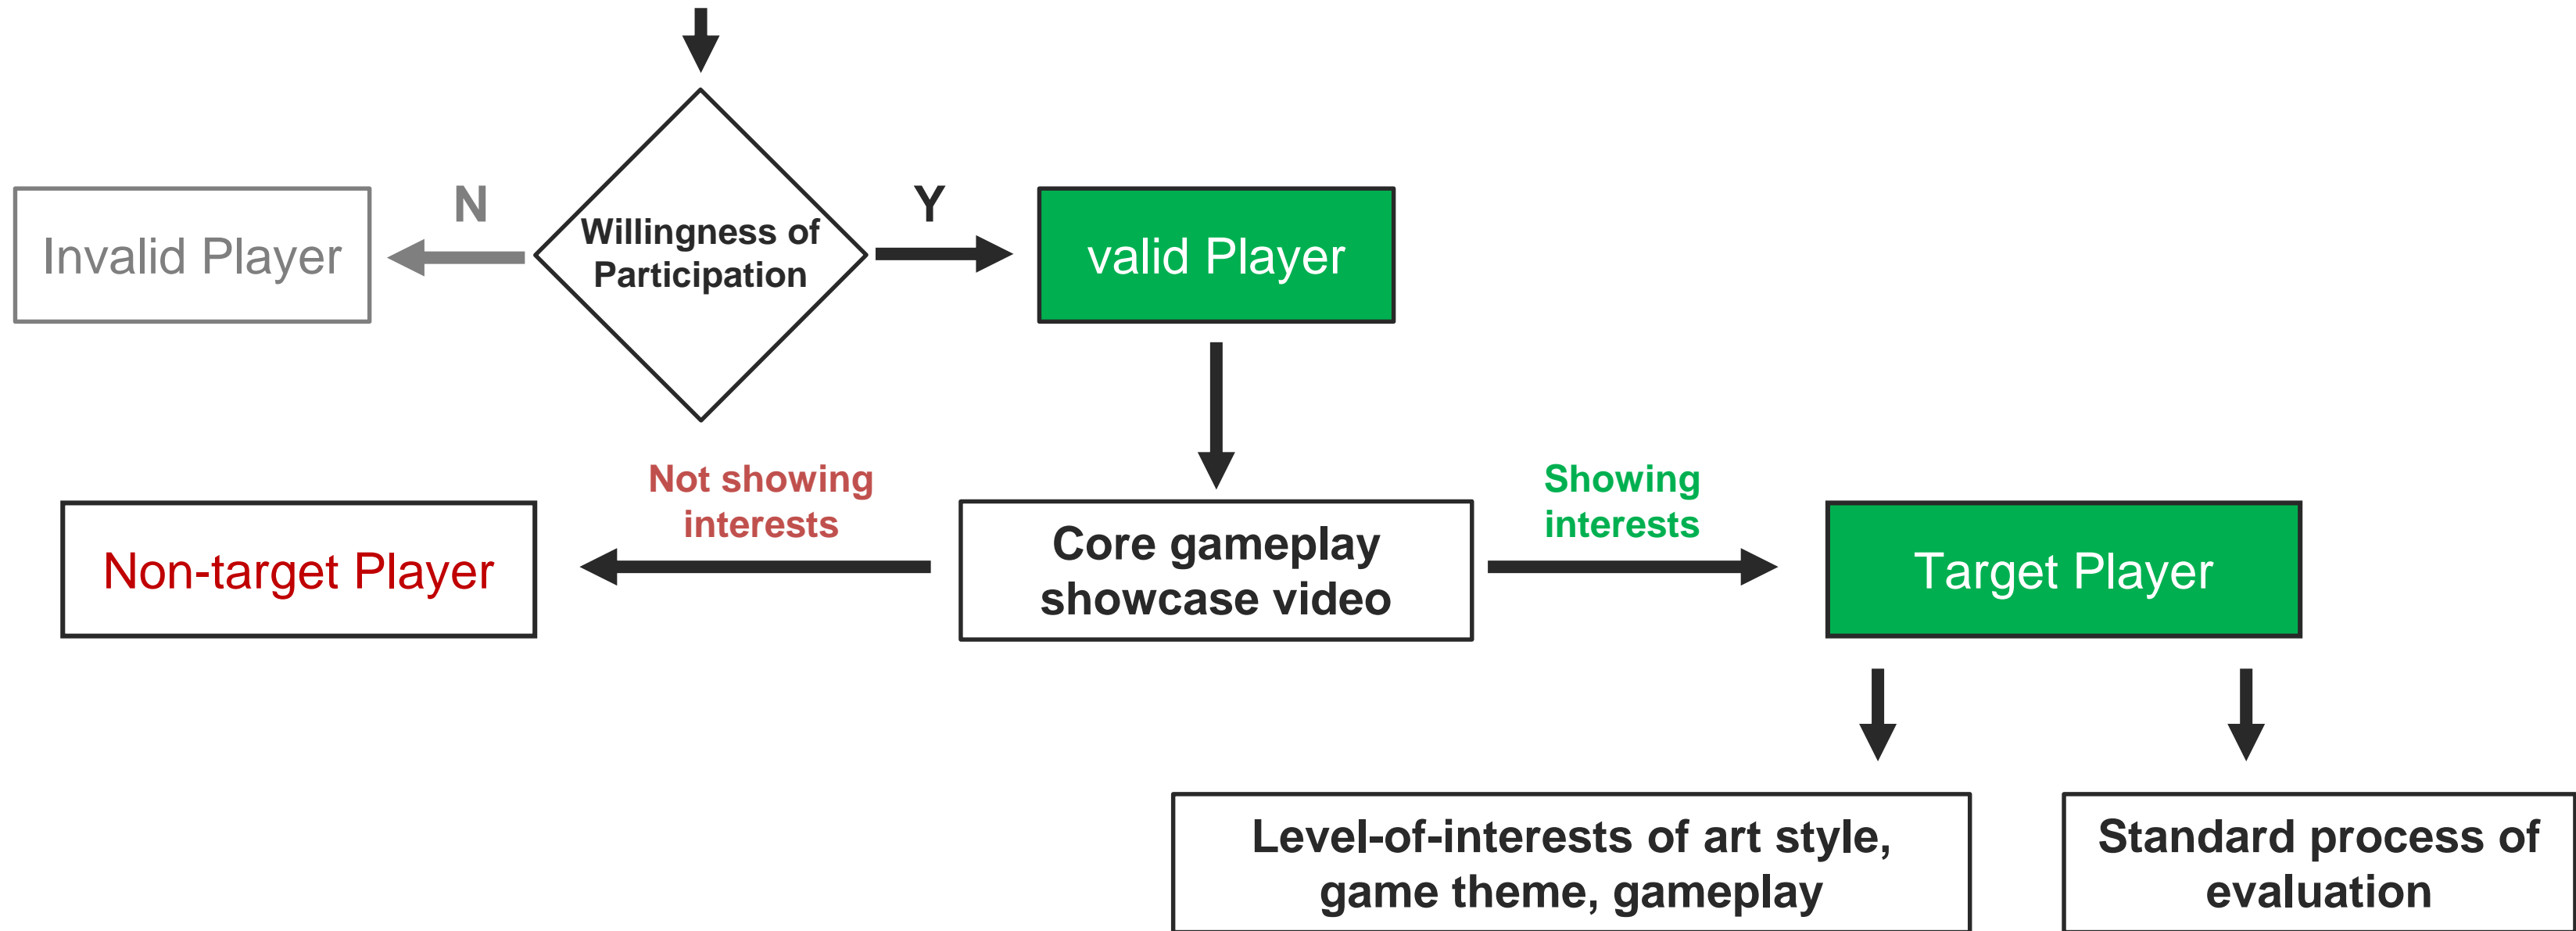

If most players in our pool are not interested in the game at this stage, we need to reconsider the players we are targeting and the game types.

Experience Evaluation: 3 X 10 Assessment

Target Player Selection

Invite players form the pool based on controlled conditions

Beginner tutorials and standardization

Beginner Tutorial

Process

Consistent
Language

Building foundational skill sets

Scope of skill sets

Core gameplay intro and experience

Experience Evaluation: 3 X 10 Assessment

Real Game Experience

Players are willing to play the game patiently, unacted on distraction from the tester and their friends.

Things to investigate in gameplay experiences

1. Game actions and issues
2. Gameplay appreciation points
3. Confusing points
4. Complaints
5. Emotion change
6. First impression and surprising points

Experience Evaluation: 3 X 10 Assessment

Game Evaluation

Evaluation of players' surprising level with quantitative scales

**Comparing to similar games you have played
(-5 to +5 scales)**

**Not my type of
game at all**

**Amazing game exceeding
my expectation**

Game Evaluation

Whether players can get the game's surprise point and highlights when experiencing

Attraction

How attractive are highlights for players?

Experience Evaluation: 3 X 10 Assessment

Game Evaluation

Use a scale to evaluate players' willingness to experience and download

**How willing are players to
download and play the game?**

Experience Evaluation: 3 X 10 Assessment

Game Evaluation

Play by own (players)

Observe and record

Standard process for
evaluation

Qualitative & quantitate

Experience Evaluation: 3 X 10 Assessment

Game Evaluation

In the stage of analyzing the results, we can draw conclusions by making comparisons between your score and the criteria.

- 1 If something wrong with the core gameplay, then make adjustment on the idea
- 2 To know how to adjust and which key points get wrong through the evaluation results

Experience Evaluation: 3 X 10 Assessment

1 To make it clear about the game's core

2 If the artistic effect weighs, the overall score needs to be **more than 2**

NetEase's Lessons

Excessive Pursuit of Scores

Create surprises

Narrow user base

- Many players are interested in the gameplay
- If you find users within narrow market limits
- Excessively pursuing score brings bias for future market performance

Art resources difficult to replicate

**Replicable
&
non-replicable art resources**

Screenshots from NARAKA: BLADEPOINT

Extensive distribution of market segments

market segmentation

With a low player base, but huge inputs on R&D of games on the market segments.

Game A

Game B

Game C

Game D

⋮

DO NOT involve teenagers under 14 years old

Independent to some degree, but
incompletely

Reverse psychology leads to
bias for evaluation

Suggestions from NetEase

DO NOT excessively pursue score

Reconstruct perceptions and trust of decision-makers

Focus on assisting projects with resources, instead of establishing more projects

Keep user engagement during R&D

**To hear users' voice during R&D,
thus to help decision-makings through users' suggestions**

Takeaway

1. To inspire audiences on early evaluations on games and make them pay attention to that, and get audiences know about NetEase's definitions and key factors on those.
2. Approaches to organizing effective evaluations at an early stage to evaluate whether your game is a "good idea" or not.
3. Experience and lessons from NetEase on early evaluation.
