# MUDRammer – A Modern MUD Client

so ANSI

WOW

> cast cloak of clouds

A cloak of clouds billows up from the ground, enveloping you completely.

A baby wuzzie is here.

> cast bolt of thunder at baby

You point a finger at the baby wuzzie, and there is a brief crackle of electricity, followed immediately by a deafening bolt of thunder that rips it limb from limb.

You disintegrate the baby wuzzie.

You kill the baby wuzzie.

Your cloak of clouds swirls restlessly.  
Your cloak of clouds swirls restlessly.  
Your cloak of clouds swirls restlessly.  
Your cloak of clouds blows away,  
leaving you feeling VULNERABLE!!!

# Brian Schmidt

# Design Goals

- Audio-only game with specific 'niche' market targets
- 3D audio nerds
- Gamers with visual impairments

# Audio Only Game

- Natural for gamers with visual impairments, right?
- Made some bad assumptions.
- But they were easy to correct

Good assumption 1:  
The iOS Accessibility API's are  
pretty easy to use

- Quite straightforward to add basic accessibility

# Bad assumption 1: Assuming I can emulate the blind experience

- Playing the game blindfolded is not emulating the experience of a visually impaired player

# Good Assumption 2: User feedback would be helpful

- The visual impaired gamer community is a great community and (thus far) seems to be troll-free..

## Bad assumption 2: Sightless Players will “get it”

- Had added visual hints for sighted players
- Quickly learned I need analogous hints for blind gamers

# Good Assumption 3: Use Siri voice for 'help'

- Siri is a known entity, so it felt natural to use it in-game appropriately
- iOS 7 Voice API's make it even easier

# Bottom line

- Knowing how blind gamers interact with their devices is key
- Small additions (even to an audio only game) made objectives easier to understand for the VI community

**Brandon Cole**

@superblindman

I'm just an average blind dude who likes his video games, his music, and his books, and loves his fiance.
