

FORGING AUDIO WORKFLOW CHANGES ON DESTINY: RISE OF IRON

Kareem Shuman

Audio QA

Bungie

INTRODUCTION

What is Rise of Iron?

- Destiny Expansion
- Developed by Bungie
- Released Sept. 20th 2016

THE CONVERSATION

The challenges of mixing new content:

- Last stage of audio development
- Audio room
- Multiple passes on all new content
- Navigating through content as it moves closer to ship date

THE PROCESS

Audio Dev Process:

- Plan and organize
- Recording Sessions
- Sound design (DAW)
- Implementation (Wwise)
- **Final Mix**
 - Last 3 weeks
 - Has to be experienced in-game

MULTIPLAYER CONTENT

Rise of Iron included:

- 1 New PvP Mode
Supremacy (6 vs 6)
- 4 New PvP maps
- 3 New Strikes
3 player co-op
- 1 New Raid
6 player co-op

RAIDING SOLO

What is a Destiny Raid?

- End game content
- 6 player co-op
- Lots of unique content

WORKFLOW CHANGE

Audio Mix Playtests:

- Practice sessions before mix
- Audio room connected to Playtest room
- Coordinated with dedicated QA teams
- Real gameplay

DESTINY IS BIG

New content can unlock when you:

- Complete a mission
- Complete a quest
- Level up
- Pick up certain items
- Get enough players in your party
- Complete a puzzle
- Download an update
- Etc.

THE PAST...

Debug commands would be:

- Typed into Command Line in game (difficult on a console build)
- Accessed via a Debug Menu using controller shortcuts
 - Series of nested menus
 - Organized differently by branch
 - Lots of repetition

BUNGIE

DESTINY

BUNGIE TOOL: GUARDIAN

Guardian, our internal development tool:

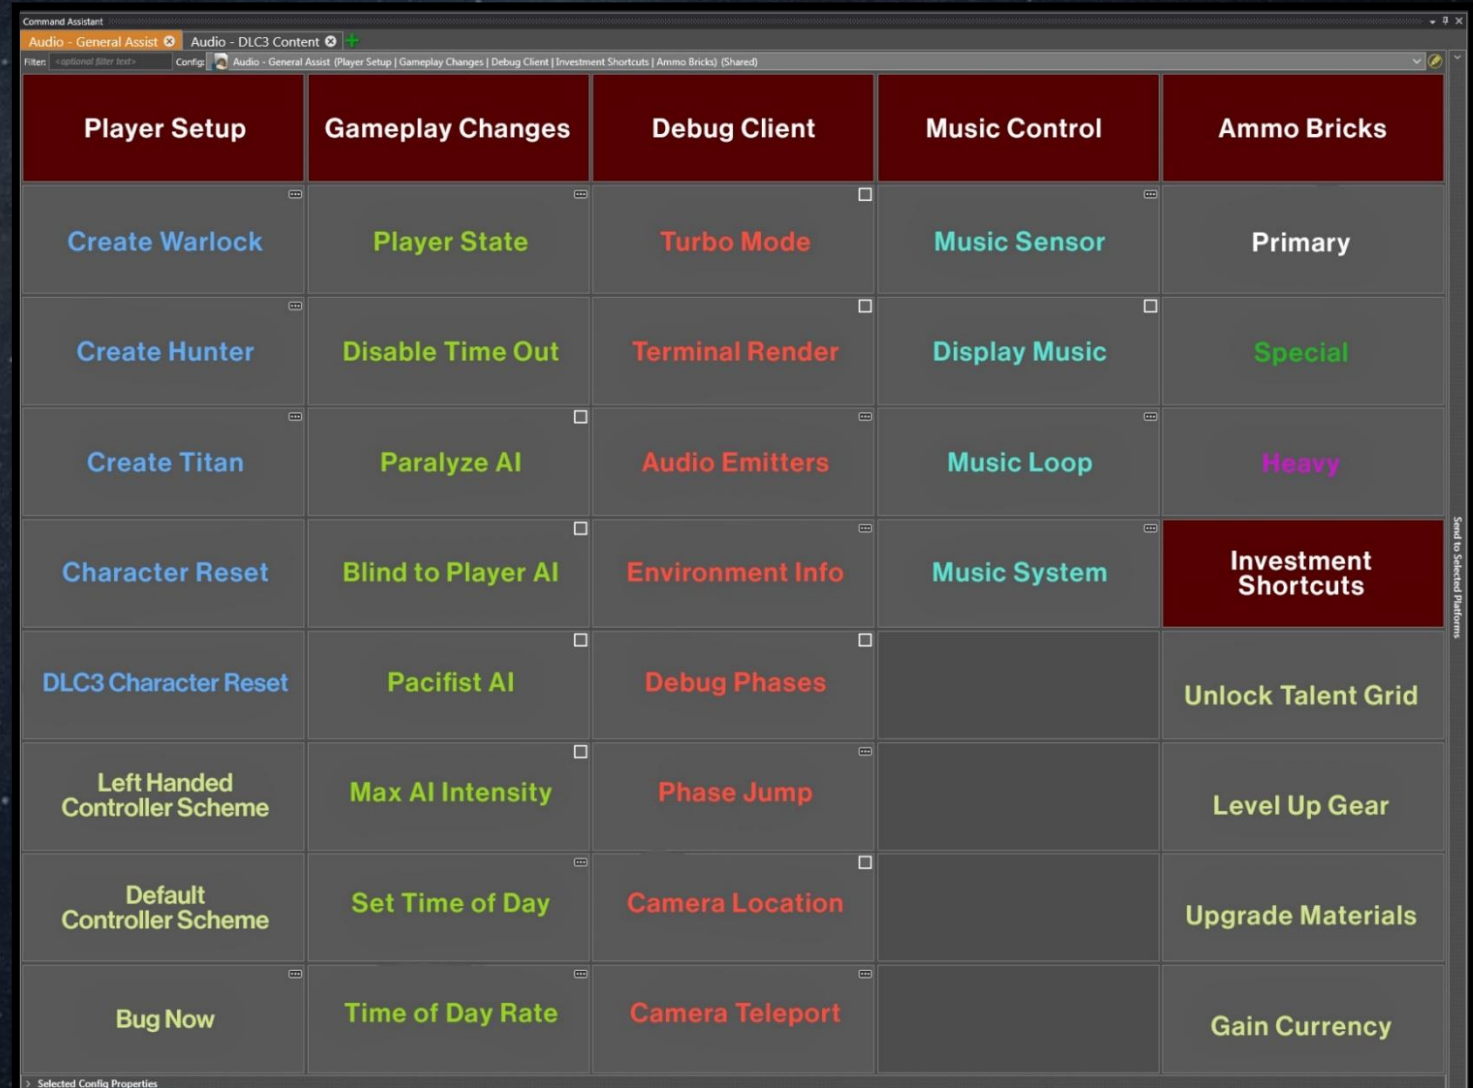

- Runs on our PCs
- Connects to dev kits
- Functions include:
 - Build propping assistant
 - Command Console Input/Output
 - Screenshots
 - Virtual Controller
 - Command Assistant!

THE FUTURE...

Guardian's Command Assistant allows for:

- Custom buttons that can group multiple debug commands
- Buttons with dropdowns or custom entries
- Easy to organize and color code
- Easy to share with the whole office

WHAT WE LIKE

Useful audio debug commands:

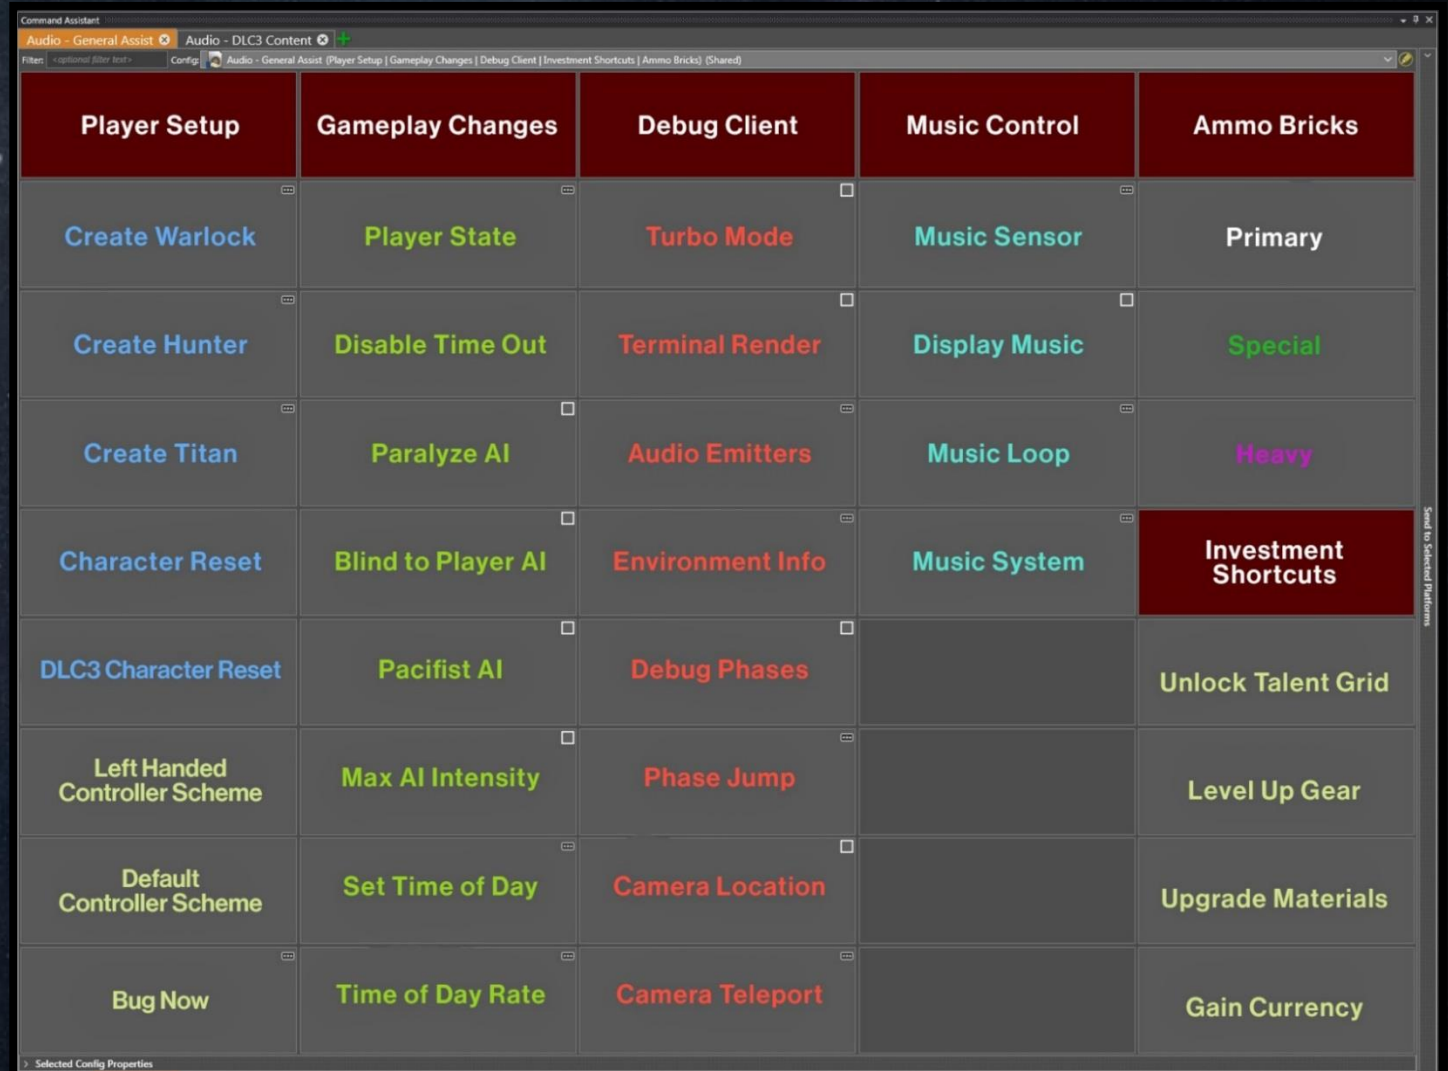

- Event Emitters
- Distance, Occlusion, Obstruction
- Environment Info
- Material Info
- Commands that let you wander around without actually playing

MAKING IT WORK

Using Guardian to improve Audio's Workflow:

- Created custom Command Assistants for the Audio team
- Function and layout based on Audio team's needs
- Priority was ease of use
- Verify and iterate
- Teach the team how it works
- Take requests and keep customizing

The screenshot shows the 'Command Assistant' window with a grid of commands. The columns are: Player Setup, Gameplay Changes, Debug Client, Music Control, and Ammo Bricks. The rows list various commands, some of which are highlighted in red or green. A 'Send to Selected Platform' button is visible on the right side.

Player Setup	Gameplay Changes	Debug Client	Music Control	Ammo Bricks
Create Warlock	Player State	Turbo Mode	Music Sensor	Primary
Create Hunter	Disable Time Out	Terminal Render	Display Music	Special
Create Titan	Paralyze AI	Audio Emitters	Music Loop	Heavy
Character Reset	Blind to Player AI	Environment Info	Music System	Investment Shortcuts
DLC3 Character Reset	Pacifist AI	Debug Phases		Unlock Talent Grid
Left Handed Controller Scheme	Max AI Intensity	Phase Jump		Level Up Gear
Default Controller Scheme	Set Time of Day	Camera Location		Upgrade Materials
Bug Now	Time of Day Rate	Camera Teleport		Gain Currency

THE RESULTS

With an Audio Command Assistant shared to all of Bungie:

- Audio QA efficiency improved
- Audio Team could navigate in Destiny much more easily
- Other teams could more easily investigate audio issues

THE LESSONS

The takeaways of this talk are:

- Audio teams need a lot of support to succeed
- Enable those around the audio team to help
- Replicate actual gameplay
- Great tools allow us to work smarter
- Making those tools intuitive is critical
- When there's time, look ahead

THANK YOU!

“Saved a shit-ton of time. Mix requires so much repetition, so avoiding complicated commands was awesome.”

– David Henry (Audio Design Lead)

“A thing of beauty. Greatly improved our efficiency for mixing and playtesting.”

– Jay Weinland (Head of Audio)

“Intuitive, easy to glance at and get to where you needed. It was so helpful at a point in development when everything was on fire.”

– Kevin McMullan (Dialogue Director)

“Guardian was a one stop shop for all the content. Daily set up was reduced to a few clicks and when flags were changed, buttons were updated right away.”

– Evan Buehler (Senior Audio Designer)

“Without the huge time savings these changes gave us in mix, we wouldn't have been able to deliver our best-in-industry level audio. Period.”

– Victor Hallock (Audio Producer)
