# GDC

# Visual Effects Bootcamp: Rapid Talks

GAME DEVELOPERS CONFERENCE" | FEB 27-MAR 3, 2017 | EXPO: MAR 1-3, 2017 #GDC17

#### Agenda

- Alim Chaarani
- Andy Lomerson
- Fred Hooper
- Matt Radford
- Nadab Göksu
- Sarah Grisson

# GDC

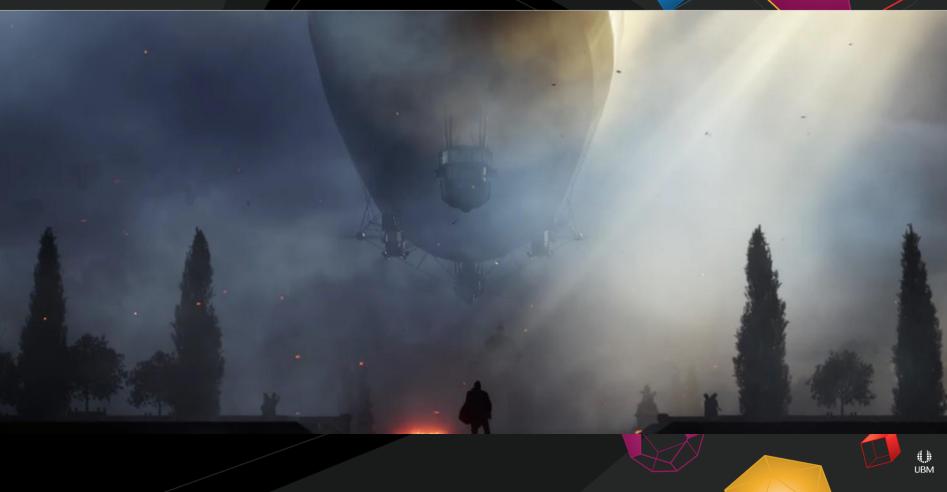

It said boom!, but the intensity wasn't right.

Nadab Göksu Senior Visual Effects Artist, EA DICE

GAME DEVELOPERS CONFERENCE" | FEB 27-MAR 3, 2017 | EXPO: MAR 1-3, 2017 #GDC17

	Polynomial (EmitterNormWindSpeed)			Lifetime	
	Polynomial (EmitterNormTime)			SpawnRate	
			Ph	ysics	
	Polynomial (NormTime)		۰	Air Resistance	
			۰	Gravity	
	Polynomial Operator (EmitterNormTime)	$\mathbf{\bullet}$	۰	Local force	
			۰	World wind

	Polynomial (NormTime)		۰	Size	
andom (EmitterParameterDistance, One)			٠	SpawnSize	

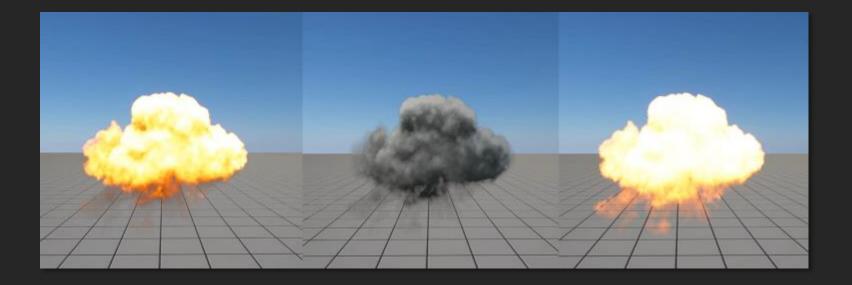

5/5/5/5

Summery
Easy to Art Direct.
Consistent Style.
Saved us alot of work.

# Thank you!

# GDC

# **Building A Better Explosion**

**Fred Hooper** Lead VFX Artist, Nvidia

GAME DEVELOPERS CONFERENCE" | FEB 27-MAR 3, 2017 | EXPO: MAR 1-3, 2017 #GDC17

# Overview

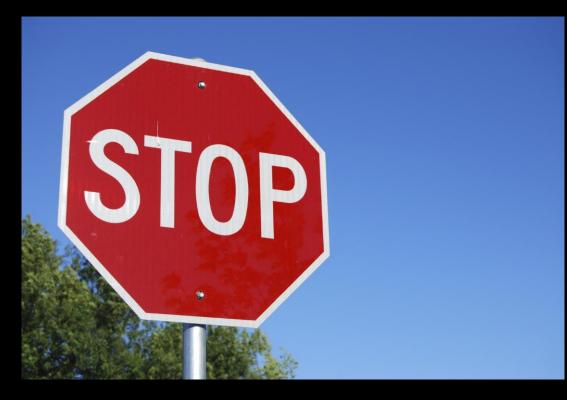

#### • Explosions = hard!

- Lots of stuff in an explosion
  - Miss one and might you break it!
- You think you know what you want
- So does everyone else
- Planning process!
  - Time
  - Rework

# Tip#1: Talk Talk Talk

- Talk to:
  - Art
  - Design
  - Sound
- Common language
- The game is most important

## STOP: Make a Visual Target

• Make a Concept

- Answer these questions BEFORE concept:
  - Theme
    - Are you making Real/hyperreal/cartoony
      - Does the whole game follow this theme?
    - Are you making an X type of explosion
      - Grenade
      - Fuel
      - non real sci fi/magic type of explosion
    - How is it viewed?
      - From all angles
      - Hero shot

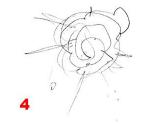

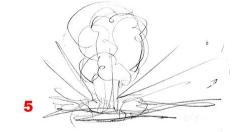

N

,to

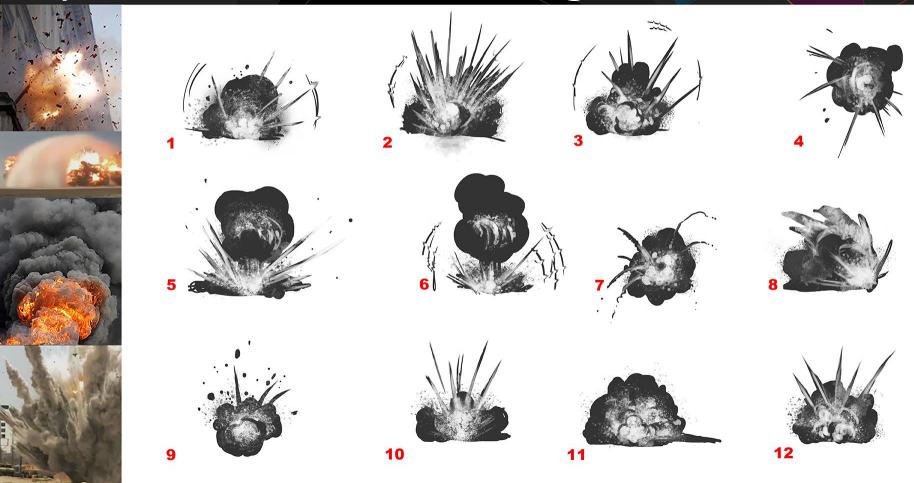

10

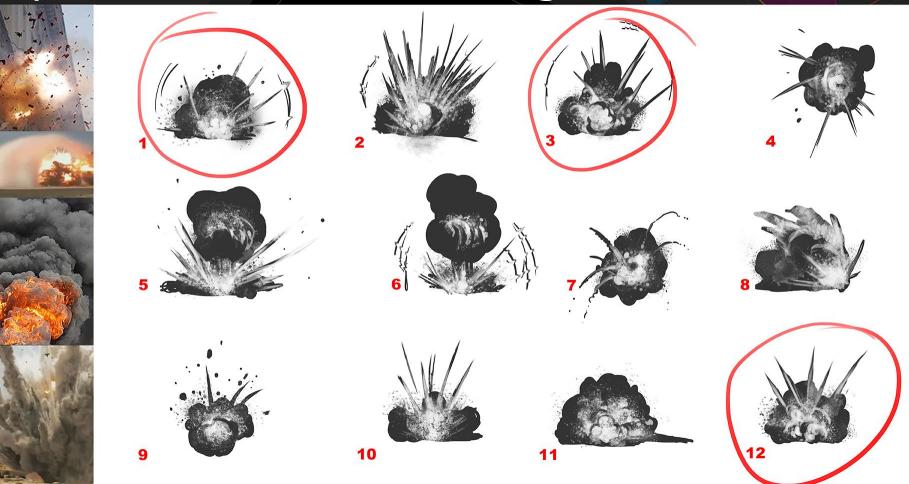

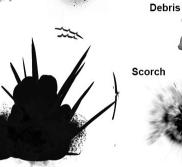

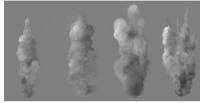

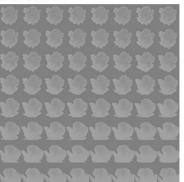

**Directional Smoke** 

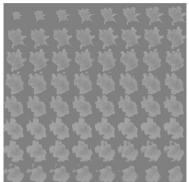

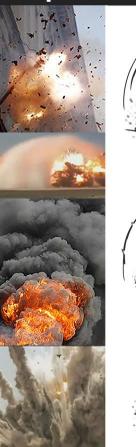

Grit

#### Slow Smoke

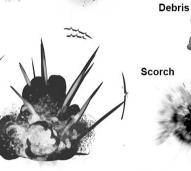

Quick Smoke

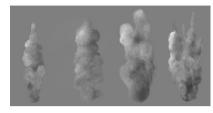

**Directional Smoke** 

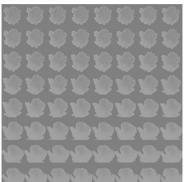

s and a second sec

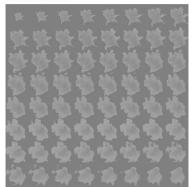

Grit

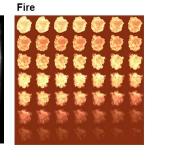

Slow Smoke

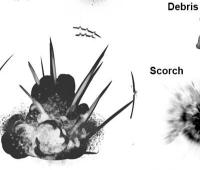

**Quick Smoke** 

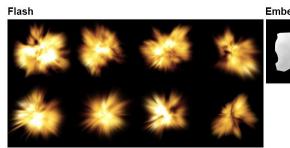

**Directional Smoke** 

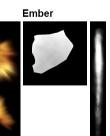

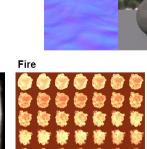

Grit

Slow Smoke

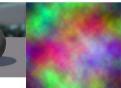

Spark

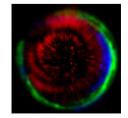

**Heat Normal** 

Mesh Noise Pack

Quick Smoke

**Concussion Pack** 

- Here are your assets for the explosion.
  - Production types love this:

#### Non Emissive

- Material/Shader
  - Lit shader
  - GPU shader
- Textures
- Smoke render
  - Slow render
  - Quick render
- Debris texture (GPU)
- Grit/Bits texture (GPU)
- Scorch shader
  - Scorch texture

#### Emissive

- Material/Shader
  - Emissive Base
  - Emissive GPU
- Fire Render
- Flash Shapes
- Embers (GPU)
- Sparks (GPU)

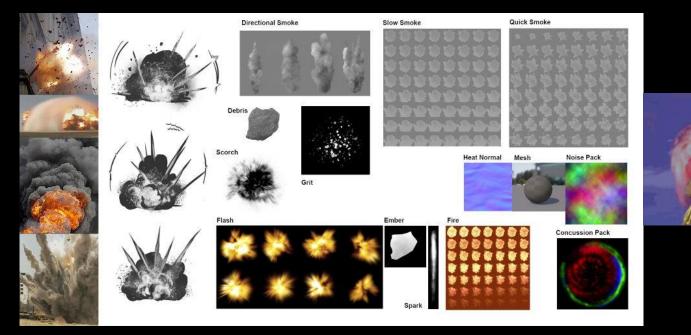

#### **Explosion Effect**

#### Concussive

- Material/Shader
  - Mesh Heat
  - Concussion Shape
     material
- Sphere Mesh
- Textures
- Packed concussion texture
- Packed Noise texture
- Heat Normal

#### Game side stuff

So now you got your target:
LETS START BUILDING!!!

# STOP (again): Game Data

Collect Game side data

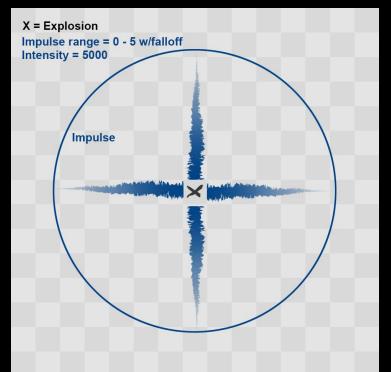

### Tip#3: Collect Game Data

- Now you need to answer the game side questions:
  - Damage
    - World amounts (intensities)
    - Range
    - Falloff
      - Post
      - Rumble
      - Camera Shake

X = Explosion	Damage = 100 pts Damage Range (Full) = 1m Falloff Range = 3m
Dmg Falloff	
Domag	
Damage	

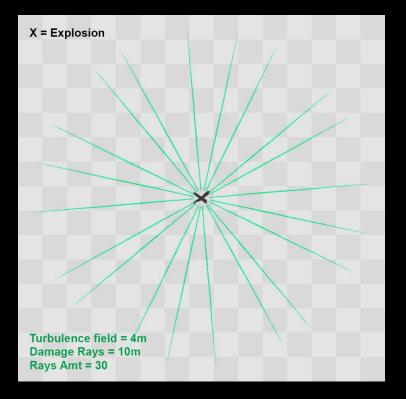

### Tip#3: Collect Game Data

- More game side questions:
  - Forces area of effect
    - Impulse/Push/Pull
    - Damaging/Destruction/Physics
    - Falloff

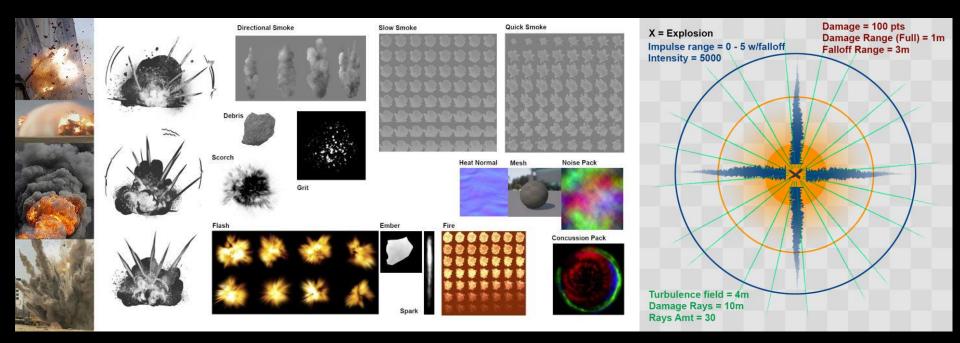

### Tip#3: Collect Game Data

- Even MORE questions:
  - Lighting
    - Are the lights a part of the effect or an object in the game?
  - Advantages
    - In House tools/tricks/secret stuff
    - Use in house tools to your benefit

### Finally!

### Go Build

### Thank You!

# GDC

### Visual Effects: From Concept to Ship

#### Alim Chaarani Lead VFX Artist, Blizzard Entertainment

GAME DEVELOPERS CONFERENCE" | FEB 27-MAR 3, 2017 | EXPO: MAR 1-3, 2017 #GDC17

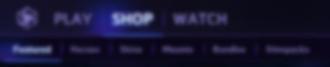

### OF THE STORM

EA

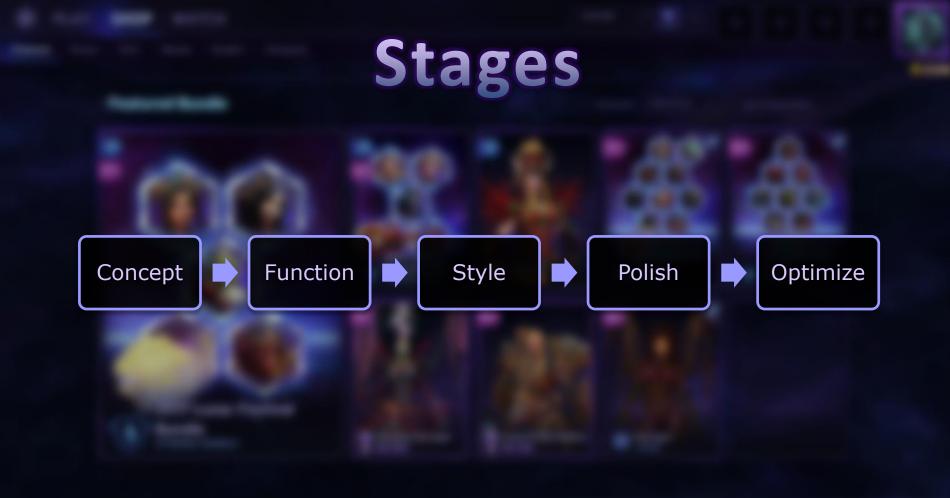

#### **Featured Bundle**

#### What is the story?

#### **Brainstorm!**

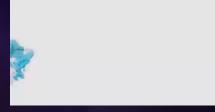

- Gather with various disciplines
- Use a moderator
- Every voice matters!
- Compile ideas into a document

5.

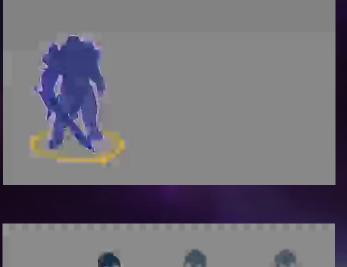

Call out Dependencies!

- Art (Model, Rig, Anims, Concept)
- Programming(Feature, Tools)

• The earlier, the better

### How will our concept work in game?

#### Prototype

- Block things in
- Reuse assets
- Establish functionality
- Don't get attached

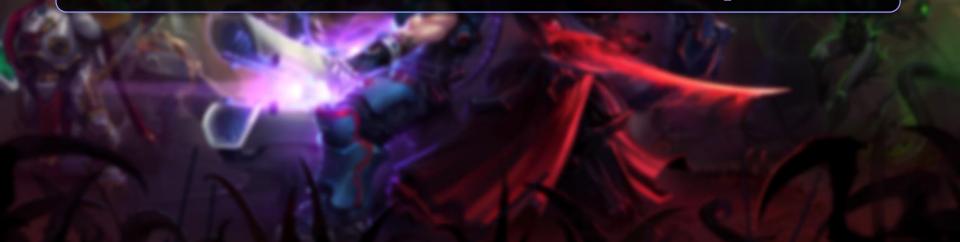

#### **Play Testing!**

- Clarify stage
- Collect and prioritize feedback
- Adjust and review again
- Repeat for each stage

## Style

### Style

### What is our visual identity?

### Style

### **Visual Identity**

- Start with one ability
- Define unique elements
- Reinforce game design
- Reuse elements

## Polish

### Polish

### How clear is your presentation?

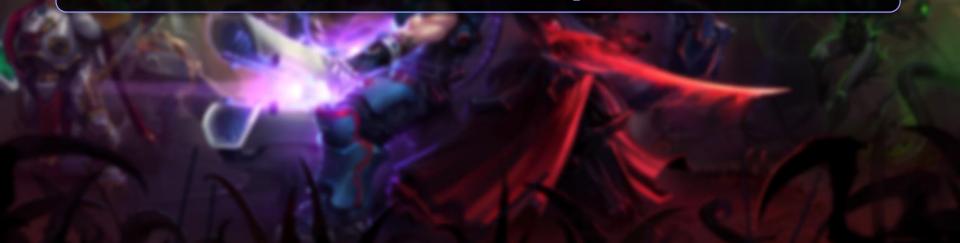

## Optimize

### Optimize

### **Does it ruin the experience?**

# Optimize

# How we tackle this:

- Know your engine!
- Seek guidance
- Prioritize by importance
- Level of detail (LOD)
- Communicate and compromise
- No expensive features for game play
- Share knowledge with team

## Something's Burning! FX Fundamentals of Flames from a Moving Object

Andy Lomerson

Effects Artist, Vicarious Visions

GAME DEVELOPERS CONFERENCE" | FEB 27-MAR 3, 2017 | EXPO: MAR 1-3, 2017 #GDC17

## what?

- FX for flaming moving objects!
- Behaves realistically
- Robust without being too expensive
- Doesn't fall apart when animators and designers do unexpected things to it

## reference

## breakdown

## breakdown > at rest

## breakdown > transition to moving

## breakdown > movement > slow

## breakdown > movement > slow to fast transition

## Breakdown > movement > slow to fast transition

## breakdown > movement > fast

## breakdown > inherited velocity?

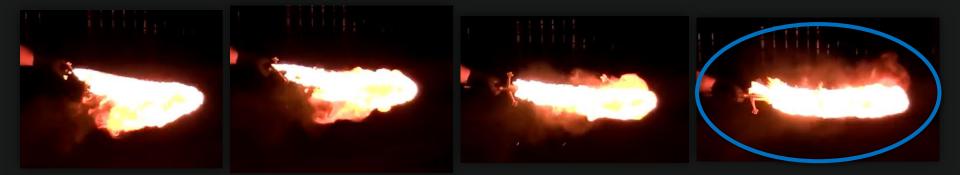

## breakdown > movement > changing directions

## breakdown > movement > transition to rest

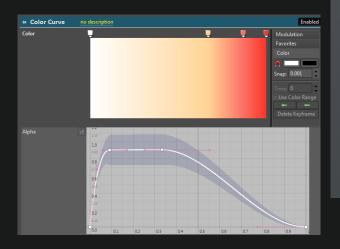

#### **Fundamentals Checklist**

- Speed of moving object affects flame life
  - Slowly moving > longer life
  - Faster moving > shorter life
- Short living flames don't have the opportunity to rise
- Flame life decreases rapidly when object is moving fast
- Lifetime of already living flames is not affect by object's speed
- Flames quickly build back up when the object comes to a rest
- Flames spawn across object's surface no matter the speed

## In engine > simple fire material

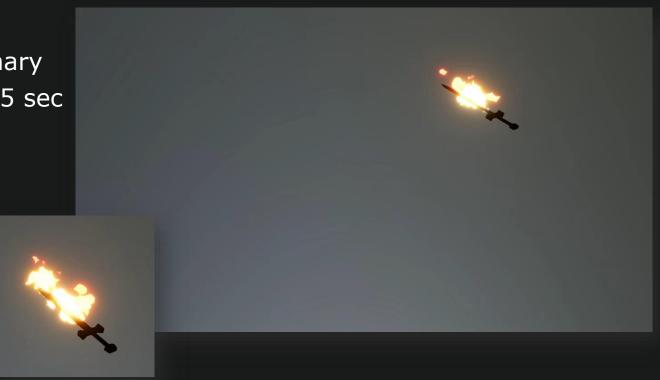

#### in engine > particle lifetimes

- Speed of moving object affects flame life
  - Slowly moving > longer life
  - Faster moving > shorter life
- Life of already spawned flames is not affect by object's speed
  - This leads to longer living flames "tearing off"
- Flame life decreases rapidly when object is moving fast
- Adjust spawn rates to compensate for lifetimes

#### in engine > two emitter solution

- spawn by rate
- focus on stationary
- lifetime 0.5-0.55 sec

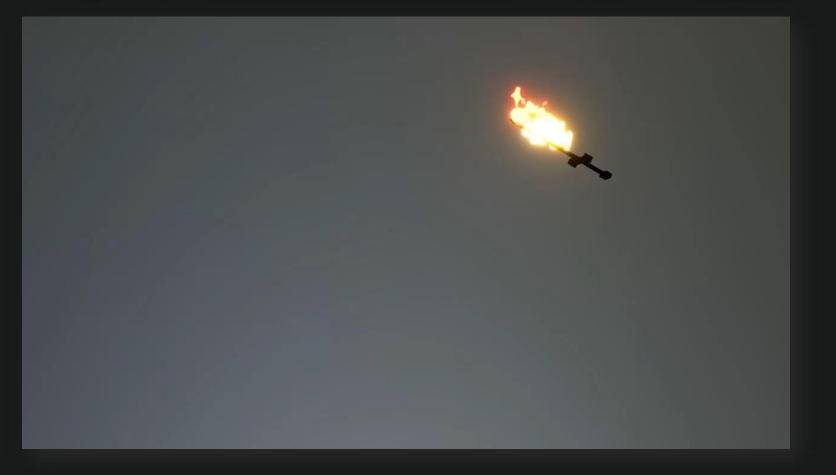

#### in engine > two emitter solution

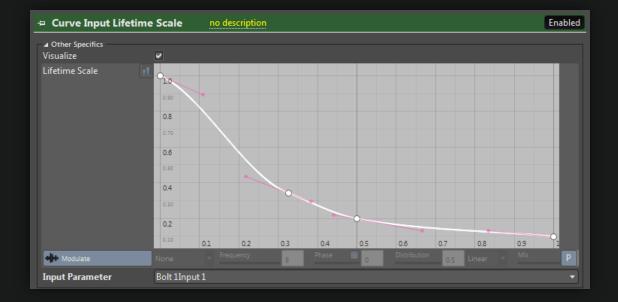

- spawn by distance
- focus on moving
- lifetime 0.2 sec

#### in engine > two emitter solution

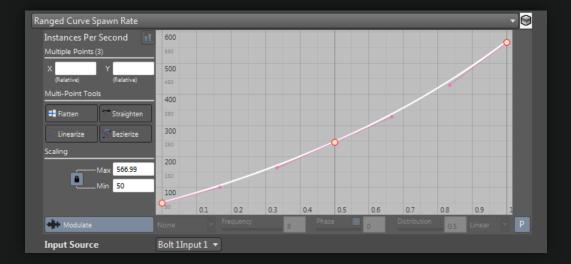

#### in engine > lifetimes based on velocity

# in engine > lifetimes based on velocity

#### in engine > one emitter solution

#### in engine > one emitter solution

#### in engine > perf
